

Increasing and Decreasing Functions

The concepts of increasing and decreasing are closely linked to **intervals** or subsets of a function's domain.

Suppose S is an interval in the domain of $f(x)$, so $f(x)$ is defined for all x in S .

$f(x)$ is **increasing** on $S \Leftrightarrow f(a) \leq f(b)$ for all $a, b \in S$ such that $a < b$

$f(x)$ is **decreasing** on $S \Leftrightarrow f(a) \geq f(b)$ for all $a, b \in S$ such that $a < b$

Increasing
 $f(x_2) > f(x_1)$
 $f'(x) > 0$

Decreasing
 $f(x_2) < f(x_1)$
 $f'(x) < 0$

Constant
 $f(x_2) = f(x_1)$
 $f'(x) = 0$

Test for Increasing and Decreasing Functions

Let f be a function that is continuous on the closed interval $[a, b]$ and differentiable on the open interval (a, b) .

- If $f'(x) > 0$ for all $x \in (a, b)$, then f is **increasing** on $[a, b]$
- If $f'(x) < 0$ for all $x \in (a, b)$, then f is **decreasing** on $[a, b]$.
- If $f'(x) = 0$ for all $x \in (a, b)$, then f is **constant** on $[a, b]$.

Example 1: Find intervals where $f(x)$ is:

(a) increasing: $(-\infty, -1) \cup (2, \infty)$

(b) decreasing: $(-1, 2)$

At what values of x can the graph of a function change its increasing/decreasing/constant status?

The graph of a continuous function can only change its increasing/decreasing/constant status at a Critical value (i.e. relative extrema (maximum or minimum))

Example 3: Find the intervals where the following functions are increasing or decreasing:

a) $f(x) = x^3 - \frac{3}{2}x^2$

$$f'(x) = 3x^2 - 3x$$

$$= 3x(x-1)$$

$\therefore$ critical #s $\rightarrow f'(x) = 0$:

$$x = 0, x = 1$$

$\therefore$ Intervals of increase: $(-\infty, 0) \cup (1, \infty)$

Intervals of decrease: $(0, 1)$.

b) $f(x) = 3x^4 - 4x^3 - 12x^2 + 5$

$$f'(x) = 12x^3 - 12x^2 - 24x$$

$$= 12x(x^2 - x - 2)$$

$$= 12x(x-2)(x+1)$$

$\therefore$ critical #s $\rightarrow f'(x) = 0$:

$$x = 0, 2, -1$$

$\therefore$ Intervals of increase: $(-1, 0) \cup (2, \infty)$

Intervals of decrease: $(-\infty, -1) \cup (0, 2)$.

c) $f(x) = \frac{2x-3}{x^2+2x-3}$

$$f'(x) = \frac{2(x^2+2x-3) - (2x-3)(2x+2)}{(x^2+2x-3)^2}$$

$$= \frac{2x^2 + 4x - 6 - 4x^2 + 2x + 6}{(x+3)^2(x-1)^2}$$

$$= \frac{-2x^2 + 6x}{(x+3)^2(x-1)^2}, x \neq -3, 1$$

$$= \frac{-2x(x-3)}{(x+3)^2(x-1)^2}$$

$\therefore$ Intervals of increase: $(0, 1) \cup (1, 3)$

Intervals of decrease: $(-\infty, -3) \cup (-3, 0) \cup (3, \infty)$

$\therefore$ critical #s: $f'(x) = 0$

$$-2x(x-3) = 0$$

$\therefore x = 0, 3$

$f'(x)$ DNE

$x = -3, 1$

- not in the domain

- Vertical asymptotes (VA)

Extrema on an Interval

Extreme Values

Consider the following graph of $y = f(x)$ with domain restricted to a closed interval, $[a, b]$. The high and low points within the curve have been labeled along with the graph's boundary end points. The **highest point on the graph** is point B . Therefore, point B is known as the **absolute maximum** of $f(x)$ on the interval, $[a, b]$. The **lowest point on the graph** is point A . Therefore, point A is known as the **absolute minimum** of $f(x)$ on $[a, b]$.

In this case, point A is a **boundary point** of the closed interval, $[a, b]$, specifically at $x = a$.

Definitions

A function, f , has an **absolute maximum at c** if $f(c) \geq f(x)$ for all x in the domain of f .

A function, f , has an **absolute minimum at c** if $f(c) \leq f(x)$ for all x in the domain of f .

Example 1: Sketch the following functions on the given interval and determine any extrema, if they exist.

a) $f(x) = x^2 + 1$ on $[-1, 2]$

Absolute max at $(2, 5)$
Absolute min at $(0, 1)$

b) $f(x) = \frac{1}{x^2}$ on $[-2, 2]$

No absolute max.
Absolute min at $(-2, \frac{1}{4})$
and $(2, \frac{1}{4})$.

c) $f(x) = 3$ on $[-3, 4]$

Absolute max and min
for $x \in [-3, 4]$ is 3

What other type of extrema are there?

Definition of Local Maximum and Minimum Values

1. Function, f , has a **local maximum** (or relative maximum) at c if $f(c) \geq f(x)$ for all x sufficiently close to c .
2. Function, f , has a **local minimum** (or relative minimum) at c if $f(c) \leq f(x)$ for all x sufficiently close to c .

Example 2:

The graph of $f(x)$ is given below. Identify the extrema, both relative and absolute, on the interval $[-1, 10]$.

Local maximum value(s): 6, 7

Local minimum value(s): 4, 5

Absolute maximum value: 9

Absolute minimum value: 1

Under what conditions will a maximum or a minimum occur?

The Extreme Value Theorem (EVT)

A continuous function, $f(x)$, defined on a **closed, bounded** interval $[a, b]$ attains both an absolute maximum and an absolute minimum on that interval.

Definition of Critical Points

The **critical number** of a function is a value c in the domain of the function for which either $f'(c) = 0$ or $f'(c)$ does not exist. If c is a critical number, the point $(c, f(c))$ is a **critical point**.

Example 3: Find all the critical point(s) of the following functions.

a) $f(x) = 6x^5 + 33x^4 - 30x^3 + 100$

$$\begin{aligned} f'(x) &= 30x^4 + 132x^3 - 90x^2 \\ &= 6x^2(5x^2 + 22x - 15) \\ &= 6x^2(x+5)(5x-3) \end{aligned}$$

$\therefore$ critical #s $\rightarrow f'(x)=0$:

$$x=0, -5, \frac{3}{5}$$

$$\begin{aligned} f(0) &= 6(0)^5 + 33(0)^4 - 30(0)^3 + 100 \\ &= 100 \end{aligned}$$

$$\begin{aligned} f(-5) &= 6(-5)^5 + 33(-5)^4 - 30(-5)^3 + 100 \\ &= 5725 \end{aligned}$$

$$\begin{aligned} f\left(\frac{3}{5}\right) &= 6\left(\frac{3}{5}\right)^5 + 33\left(\frac{3}{5}\right)^4 - 30\left(\frac{3}{5}\right)^3 + 100 \\ &= \frac{1458}{3125} + \frac{2673}{625} - \frac{810}{125} + 100 \\ &= \frac{307073}{3125} \end{aligned}$$

$$\approx 98.3 \quad \therefore \text{Critical points at } (0, 100), (-5, 5725) \text{ and } \left(\frac{3}{5}, \frac{307073}{3125}\right).$$

b) $f(x) = \frac{x^2 + 1}{x^2 - x - 6}$

$$\begin{aligned} f'(x) &= \frac{2x(x^2 - x - 6) - (x^2 + 1)(2x - 1)}{(x^2 - x - 6)^2} \\ &= \frac{2x^3 - 2x^2 - 12x - 2x^3 + x^2 - 2x + 1}{(x-3)^2(x+2)^2} \end{aligned}$$

$$= \frac{-x^2 - 14x + 1}{(x-3)^2(x+2)^2}$$

$$\begin{aligned} f'(x)=0 &\Rightarrow x^2 + 14x - 1 = 0 \\ x &= \frac{-14 \pm \sqrt{(14)^2 - 4(1)(-1)}}{2(1)} \\ &= \frac{-14 \pm \sqrt{200}}{2} \\ &= -7 \pm 5\sqrt{2} \end{aligned}$$

$f'(x)$ DNE $\Rightarrow x=3, -2$ $\leftarrow$ Not in domain of $f(x)$
 $\therefore$ Not a critical point.

$$f(-7+5\sqrt{2}) \approx -0.166$$

$$f(7+5\sqrt{2}) \approx 1.12$$

$\therefore$ Critical points at approx. $(0.0711, -0.166)$ and $(14.1, 1.12)$.

Special Note on Fermat's Theorem and Critical Numbers

Fermat's Theorem

Suppose that $f(c)$ is a local extremum. Then c must be a critical number of f .

Fermat's Corollary

Suppose that f is continuous on the closed interval $[a, b]$, then the absolute extrema of f must occur at an endpoint, a or b , or at a critical number.

Pierre de Fermat
(1601–1665)

Fermat's theorem is true when it reads forward, but not necessarily true when read backwards. That is, not all values of c that have $f'(c)=0$ are local maximums or minimums.

Example: Consider the function $f(x) = x^3$.

Steps to Finding Extreme Values

- Step 1.** Identify all of the critical points within the closed interval by finding the values of c where $f'(c) = 0$ and where $f'(c)$ does not exist. Then, find $f(c)$ for each critical number.
- Step 2.** Find the values of f at the boundary points of the closed interval, $[a, b]$. In other words, find $f(a)$ and $f(b)$.
- Step 3.** Examine the values of f resulting from step 1 and step 2 and determine which value is the greatest (absolute maximum) and which value is the least (absolute minimum).

Example 4: Find the absolute extrema of $f(x) = 3x^4 - 12x^3$ on the interval $[-1, 2]$.

$$f'(x) = 12x^3 - 36x^2$$

$$= 12x^2(x-3)$$

$$f'(x) = 0 \rightarrow x = 0, 3$$

↑ not in the domain

$$f(0) = 0$$

$$f(-1) = 3(-1)^4 - 12(-1)^3$$

$$= 15$$

$$f(2) = 3(2)^4 - 12(2)^3$$

$$= -48$$

check the end
values of the
domain

∴ Absolute max at $(-1, 15)$ and
absolute min at $(2, -48)$.

Example 5: Determine if the EVT applies. If so, find the absolute extrema of $f(x) = 2x - 3x^{\frac{2}{3}}$ on the interval $[-8, 1]$.

$$f'(x) = 2 - 2x^{-\frac{1}{3}}$$

$$= 2 - \frac{2}{x^{\frac{1}{3}}}$$

$$= \frac{2x^{\frac{1}{3}} - 2}{x^{\frac{1}{3}}}$$

$$f(-8) = 2(-8) - 3(-8)^{\frac{2}{3}}$$

$$= -16 - 3(4)$$

$$= -28$$

$$f(1) = 2(1) - 3(1)^{\frac{2}{3}}$$

$$= -1$$

critical #s:

$$f'(x) = 0 \rightarrow 2x^{\frac{1}{3}} - 2 = 0$$

$$x^{\frac{1}{3}} = 1$$

$$x = 1$$

$$f'(x) \text{ DNE} \rightarrow x^{\frac{1}{3}} = 0$$

$$x = 0$$

$$f(0) = 0$$

∴ Absolute max is at $(0, 0)$ and
absolute min is at $(-8, -28)$.

The First Derivative Test

For a continuous function, knowing where the sign of the derivative changes, lends great insight into the existence of any **relative maxima** or **relative minima**.

The First Derivative Test (for Relative Extrema)

Let $x = a$ be a critical value of a continuous function, f .

1. If the sign of $f'(x)$ changes from **negative to positive** at $x = a$, then f has a **relative minimum** at $x = a$

2. If the sign of $f'(x)$ changes from **positive to negative** at $x = a$, then f has a **relative maximum** at $x = a$

3. If $f'(x)$ is **positive on both sides** of $x = a$ or **negative on both sides** of $x = a$, then is **neither a relative maximum nor a relative minimum**.

Example 4: Find the local extrema point(s) of the function $f(x) = x^3 - 3x + 2$.

$$f'(x) = 3x^2 - 3$$

critical #s:

$$0 = 3(x+1)(x-1)$$

$$\therefore x = -1, x = 1$$

	$(-\infty, -1)$	$(-1, 1)$	$(1, \infty)$
$x+1$	—	+	+
$x-1$	—	—	+
$f'(x)$	+	—	+
$f(x)$	↑	↓	↑
	max @ $x = -1$		min @ $x = 1$

$$f(-1) = (-1)^3 - 3(-1) + 2 = 4$$

$$f(1) = (1)^3 - 3(1) + 2 = 0$$

$\therefore$ Local max at $(-1, 4)$ and local min at $(1, 0)$.

OR

Example 5: Find the relative extrema of $f(x) = -\frac{x^4+1}{x^2}$.

$$f(x) = -x^2 - x^{-2}$$

$$f'(x) = -2x + \frac{2}{x^3}$$

$$= -\frac{2x^4+2}{x^3}$$

critical #s: $f'(x) = 0$

$$-2(x^4-1) = 0$$

$$x^4-1 = 0$$

$$x^4 = 1$$

$$x = \pm 2$$

$$f'(x) \text{ DNE}$$

$x=0$ (not in domain)

$\hookrightarrow$ VA

$$f(-1) = -\frac{(-1)^4+1}{(-1)^2}$$

$$= -2$$

$$f(1) = -\frac{(1)^4+1}{(1)^2}$$

$$= -2$$

$\therefore$ There is a local max at $(1, -2)$ and $(-1, -2)$.

Practice:

1. For $f(x) = x^3 - kx$ where $k \in \mathbb{R}$, find the values of k such that f has
 - a) no critical numbers
 - b) one critical number
 - c) two critical numbers
2. Find values of a , b , c , and d such that $f(x) = ax^3 + bx^2 + cx + d$ has a local maximum at $(2, 4)$ and a local minimum at $(0, 0)$.
3. For $f(x) = x^2 + px + q$, find the values of p and q such that $f(1) = 5$ is an extremum of f on the interval $[0, 2]$. Is this extremum a maximum value or a minimum value?
4. For what value of x does the **derivative** of $f(x) = \frac{x^4}{3} - \frac{x^5}{5}$ attain its maximum value?
5. Find the **absolute extreme** values for $f(x) = 3x^{\frac{2}{3}} \left(\frac{1}{8}x^2 - \frac{1}{5}x - 1 \right)$, $-2 \leq x \leq 2$.
6. Find the x -coordinate of the point that the function $f(x)$ given by $f(x) = 9x^{\frac{2}{3}} + 3x - 6$ has a relative minimum.
7. Find the x -coordinates of the relative extrema of the following functions:
 - a) $T(k) = \sqrt[3]{k^2}(2k - 1)$
 - b) $J(k) = \sqrt[3]{k}(2k - 1)$
8. Find the intervals where the following functions are increasing or decreasing:
 - a) $f(x) = x - 2\sqrt{x}$
 - b) $f(x) = x^2 + \frac{4}{x-1}$
 - c) $f(x) = \frac{x-2}{(x+1)^2}$
 - d) $f(x) = 3x^{\frac{2}{3}} \left(\frac{1}{8}x^2 - \frac{1}{2} \right)$

Unit 4: CURVE SKETCHING AND OPTIMIZATION

4.1 Practice:

1. For $f(x) = x^3 - kx$ where $k \in \mathbb{R}$, find the values of k such that f has

$$f'(x) = 3x^2 - k$$

- (a) no critical numbers

The quadratic equation $3x^2 - k = 0$ has no real roots or

$$D < 0:$$

$$-4(-k)(3) < 0$$

$$k < 0$$

- (b) one critical number

The quadratic equation has one real root or

$$D = 0:$$

$$-4(-k)(3) = 0$$

$$k = 0$$

- (c) two critical numbers

The quadratic equation has two real roots or

$$D > 0:$$

$$-4(-k)(3) > 0$$

$$k > 0$$

2. Find values of a , b , c , and d such that $f(x) = ax^3 + bx^2 + cx + d$ has a local maximum at $(2, 4)$ and a local minimum at $(0, 0)$.

$$f'(x) = 3ax^2 + 2bx + c$$

$$f(2) = 4 : 8a + 4b + 2c + d = 4$$

$$f'(2) = 0 : 12a + 4b + c = 0$$

$$f(0) = 0 : d = 0$$

$$f'(0) = 0 : c = 0$$

$$\begin{cases} 8a + 4b = 4 \\ 12a + 4b = 0 \end{cases} \Rightarrow \boxed{a = -1}, \boxed{b = 3}$$

Unit 4: CURVE SKETCHING AND OPTIMIZATION

3. For $f(x) = x^2 + px + q$, find the values of p and q such that $f(1) = 5$ is an extremum of f on the interval $[0, 2]$. Is this extremum a maximum value or a minimum?

$$f'(x) = 2x + p$$

$$f(1) = 5 : 1 + p + q = 5 \rightarrow p + q = 4$$

$$f'(1) = 0 : 2 + p = 0 \rightarrow \boxed{p = -2}$$

$$-2 + q = 4$$

$$\boxed{q = 6}$$

$$\therefore f(x) = x^2 - 2x + 6$$

f has a minimum at $x = 1$

4. For what value of x does the *derivative* of $f(x) = \frac{x^4}{3} - \frac{x^5}{5}$ attain its maximum value?

$$f'(x) = \frac{4x^3}{3} - x^4$$

$$f''(x) = 4x^2 - 4x^3$$

$$f''(x) = 0$$

$$4x^2(1 - x) = 0$$

$$x = 0 \text{ or } \boxed{x = 1}$$

5. Find the **absolute extreme** values for $f(x) = 3x^{\frac{2}{3}} \left(\frac{1}{8}x^2 - \frac{1}{5}x - 1 \right)$, $-2 \leq x \leq 2$.

$$f(x) = \frac{3}{8}x^{\frac{8}{3}} - \frac{3}{5}x^{\frac{5}{3}} - 3x^{\frac{2}{3}}, -2 \leq x \leq 2$$

$$f'(x) = x^{\frac{5}{3}} - x^{\frac{2}{3}} - 2x^{\frac{-1}{3}}$$

$$= x^{\frac{-1}{3}}(x^2 - x - 2)$$

$$= x^{\frac{-1}{3}}(x - 2)(x + 1)$$

$$f'(x) = 0 \rightarrow x = 2, x = -1$$

$$f'(x) \text{ dne} \rightarrow x = 0$$

$$f(-2) = -0.476$$

$$f(-1) = -2.025$$

$$f(0) = 0 \rightarrow \text{abs max.}$$

$$f(2) = -4.286 \rightarrow \text{abs min.}$$

Unit 4: CURVE SKETCHING AND OPTIMIZATION

6. Find the x-coordinate of the point that the function f given by $f(x) = 9x^{\frac{2}{3}} + 3x - 6$ has a relative minimum.

$$f'(x) = 6x^{-\frac{1}{3}} + 3$$

$$f'(x) = 0 : 6x^{-\frac{1}{3}} = -3$$

$$x^{-\frac{1}{3}} = -\frac{1}{2}$$

$$x = -8$$

7. Find the x-coordinates of the relative extrema of the following functions:

(a) $T(k) = \sqrt[3]{k^2}(2k-1)$

(b) $J(k) = \sqrt[3]{k}(2k-1)$

$$T(k) = k^{\frac{2}{3}}(2k-1)$$

$$J(k) = k^{\frac{1}{3}}(2k-1)$$

$$T'(k) = \frac{2}{3}k^{-\frac{1}{3}}(2k-1) + 2k^{\frac{2}{3}}$$

$$J'(k) = \frac{1}{3}k^{-\frac{2}{3}}(2k-1) + 2k^{\frac{1}{3}}$$

$$= \frac{2}{3}k^{-\frac{1}{3}}(2k-1+3k)$$

$$= \frac{1}{3}k^{-\frac{2}{3}}(2k-1+6k)$$

$$= \frac{2}{3}k^{-\frac{1}{3}}(5k-1)$$

$$= \frac{1}{3}k^{-\frac{2}{3}}(8k-1)$$

$$T'(k) = 0 \rightarrow k = \frac{1}{5}$$

$$J'(k) = 0 \rightarrow k = \frac{1}{8}$$

$$T'(k) = \text{dne} \rightarrow k = 0$$

$$J'(k) = \text{dne} \rightarrow k = 0 \text{ (double root)}$$

8. Find the intervals where the following functions are increasing or decreasing:

a) $f(x) = x - 2\sqrt{x}$

$$D_f = [0, \infty)$$

$$f'(x) = 1 - \frac{1}{\sqrt{x}}$$

$$f'(x) = 0 : 1 - \frac{1}{\sqrt{x}} = 0$$

$$\sqrt{x} = 1$$

$$\boxed{x = 1}$$

$$f'(x) \text{ dne} : \boxed{x = 0}$$

$f(x)$ is decreasing on $(0, 1)$

c) $f(x) = \frac{x-2}{(x+1)^2}$

$$D_f = \{x \in \mathbb{R} \mid x \neq -1\}$$

$$f'(x) = \frac{(x+1)^2 - 2(x+1)(x-2)}{(x+1)^4}$$

$$f'(x) = \frac{5-x}{(x+1)^3}$$

$$f'(x) = 0 : x = 5$$

$f'(x)$ dne : $x = -1$ not in domain

$f(x)$ is increasing on $(-1, 5)$

$f(x)$ is decreasing on $(-\infty, -1) \cup (5, \infty)$

b) $f(x) = x^2 + \frac{4}{x-1}$

$$D_f = \{x \in \mathbb{R} \mid x \neq 1\}$$

$$f'(x) = 2x - \frac{4}{(x-1)^2}$$

$$f'(x) = 0 : 2x - \frac{4}{(x-1)^2} = 0$$

$$2x = \frac{4}{(x-1)^2}$$

$$x(x-1)^2 = 2$$

$$x^3 - 2x^2 + x - 2 = 0$$

$$(x-2)(x^2+1) = 0$$

$$\boxed{x = 2}$$

$f(x)$ is increasing on $(2, \infty)$

$f(x)$ is decreasing on $(-\infty, 1) \cup (1, 2)$

d) $f(x) = 3x^{\frac{2}{3}} \left(\frac{1}{8}x^2 - \frac{1}{2} \right)$

$$D_f = \mathbb{R}$$

$$f(x) = \frac{3}{8}x^{\frac{8}{3}} - \frac{3}{2}x^{\frac{2}{3}}$$

$$f'(x) = x^{\frac{5}{3}} - x^{\frac{-1}{3}}$$

$$f'(x) = x^{\frac{-1}{3}}(x^2 - 1)$$

$$f'(x) = 0 \rightarrow x^2 - 1 = 0$$

$$x = -1 \text{ or } x = 1$$

$$f'(x) \text{ dne} \rightarrow x = 0$$

$f(x)$ is increasing on $(-1, 0) \cup (1, \infty)$

$f(x)$ is decreasing on $(-\infty, -1) \cup (0, 1)$

Curve Sketching Warm Up

1. Find the absolute maximum and absolute minimum for $f(x) = x^3 + 2x^2 + x - 1$ on $x \in [-1, 1]$.

$$\begin{aligned}f'(x) &= 3x^2 + 4x + 1 \\ &= (3x+1)(x+1)\end{aligned}$$

$$\begin{aligned}\text{critical \#s: } f'(x) &= 0 \\ x &= -\frac{1}{3}, -1\end{aligned}$$

$$\begin{aligned}f\left(-\frac{1}{3}\right) &= \left(-\frac{1}{3}\right)^3 + 2\left(-\frac{1}{3}\right)^2 + \left(-\frac{1}{3}\right) - 1 \\ &= -\frac{31}{27} \quad (\approx -1.15)\end{aligned}$$

$$\begin{aligned}f(-1) &= (-1)^3 + 2(-1)^2 + (-1) - 1 \\ &= -1\end{aligned}$$

$$\begin{aligned}f(1) &= (1)^3 + 2(1)^2 + (1) - 1 \\ &= 3\end{aligned}$$

$\therefore$ absolute min at $\left(-\frac{1}{3}, -\frac{31}{27}\right)$ and absolute max at $(1, 3)$.

2. Sketch the following functions by completing a full analysis:

a) $f(x) = x^3 - 9x^2 + 24x - 10$

b) $y = 3x^{\frac{2}{3}} - 2x$

Solutions on next page

$$\begin{aligned} a) f'(x) &= 3x^2 - 18x + 24 \\ &= 3(x^2 - 6x + 8) \\ &= 3(x-2)(x-4) \end{aligned}$$

critical #s $\rightarrow f'(x) = 0$

Concavity and the Second Derivative Test

If we know that a function has a positive derivative over an interval, we know the graph of the function is increasing on that interval, but HOW is it increasing? At a constant rate? At an increasing rate? At a decreasing rate?

The two functions below both increase, but they bend differently, and therefore, have different curvature. The function on the left is increasing at an **increasing** rate and the function on the right is increasing at a **decreasing** rate.

If we analyze the tangent lines in each of these cases at several points, we can begin to talk about how the **slopes**, and not just the y -values are changing.

Concave Up

Concave Down

In the graph on the left, the tangent lines are **below** the curve and are **increasing from left to right**. In this case, we say the **graph is concave up** (like a cup). In this case, the secant lines are above the curve. If the slopes of f are increasing, the **second derivative, $f''(x)$, is positive**. $f' > 0 \Rightarrow f'' > 0$

In the graph on the right, the tangent lines are **above** the curve and are **decreasing from left to right**. In this case, we say that graph is **concave down** (like a frown). In this case, the secant lines are below the curve. If the slopes of f are decreasing, the **second derivative, $f''(x)$, is negative**.

$$f' < 0 \Rightarrow f'' < 0$$

Concavity Test

- 1) If $f''(x) > 0$ for all x in an interval, then $f(x)$ is **concave up** (like a cup) on that interval.
- 2) If $f''(x) < 0$ for all x in an interval, then $f(x)$ is **concave down** (like a frown) on that interval.

Example 1: In the graph below, list the open intervals on which the graph of the function is concave up (CU) and concave down (CD).

Concave up on the intervals: $(-\infty, 0) \cup (1.5, 3) \cup (5, \infty)$

Concave down on the intervals: $(0, 1.5) \cup (3, 5)$

Example 2:

Sketch a possible graph of a function $f(x)$ that satisfies the following conditions:

- $f'(x) > 0$ for $x < 1$ and $f'(x) < 0$ for $x > 1$
- $f''(x) > 0$ for $x < -2$ or $x > 2$ and $f''(x) < 0$ for $-2 < x < 2$
- $\lim_{x \rightarrow -\infty} f(x) = -2$ and $\lim_{x \rightarrow \infty} f(x) = 0$

HA

HA

sign chart for $f'(x)$

sign chart for $f''(x)$

Type ①:

Type ②:

Type ③:

$$f'(c) = 0$$

$$f''(c) = 0$$

Type ④:

$$f'(c) \text{ DNE}$$

Point of Inflection

A point $(c, f(c))$ on a curve $y = f(x)$ is called an **inflection point** if the graph of f changes from concave up to concave down OR from concave down to concave up at $(c, f(c))$.

That is to say if $f''(c) = 0$ or $f''(c)$ does not exist and the sign of $f''(x)$ changes from positive to negative or from negative to positive at $x = c$, then $x = c$ is an inflection point of $f(x)$.

Example 3: Determine the open intervals on which the graphs of the following functions are concave up or concave down and find the inflection point(s), if any.

a) $y = 3 + x^4$

$$y' = 4x^3$$

$$y'' = 12x^2$$

Possible P.O.I's $\Rightarrow y'' = 0$:

$$x = 0$$

$\therefore$ The function is concave up on $(-\infty, \infty)$ and there are no inflection points.

b) $y = 6(x^2 + 3)^{-1}$

$$y' = -6(x^2 + 3)^{-2} \cdot (2x)$$

$$= -12x(x^2 + 3)^{-2}$$

$$y'' = 24x(x^2 + 3)^{-3}(2x) - 12(x^2 + 3)^{-2}$$

$$= 12(x^2 + 3)^{-3}[4x^2 - x^2 - 3]$$

$$= 12(x^2 + 3)^{-3}[3(x^2 - 1)]$$

$$= \frac{36(x+1)(x-1)}{(x^2 + 3)^3}$$

Possible POI's

$$y'' = 0:$$

$$x = \pm 1$$

$$y'' \text{ DNE:}$$

$$x^2 + 3 = 0$$

no sol'ns

$\therefore$ POI's at $x = -1, 1$

At $x = 1, y = 6[(1)^2 + 3]^{-1}$ | At $x = -1, y = 6[(-1)^2 + 3]^{-1}$

$$y = \frac{6}{4}$$

$$y = \frac{3}{2}$$

$\therefore$ Function is concave up on $(-\infty, -1) \cup (1, \infty)$ and concave down on $(-1, 1)$

The points of inflection are $(1, \frac{3}{2})$ and $(-1, \frac{3}{2})$

c) $f(x) = \frac{x-1}{x+4}$

$$\begin{aligned} f'(x) &= \frac{(x+4) - (x-1)}{(x+4)^2} \\ &= \frac{5}{(x+4)^2} \\ &= 5(x+4)^{-2} \end{aligned}$$

$$\begin{aligned} f''(x) &= -10(x+4)^{-3} \\ &= \frac{-10}{(x+4)^3} \end{aligned}$$

Possible POI's $\Rightarrow f''(x)$ DNE:

$x = -4$ $\leftarrow$ Not in domain of $f(x)$

$\therefore$ The function is concave up on $(-\infty, -4)$ and concave down on $(-4, \infty)$.

d) $f(x) = x^4 - 4x^3$

$$f'(x) = 4x^3 - 12x^2$$

$$\begin{aligned} f''(x) &= 12x^2 - 24x \\ &= 12x(x-2) \end{aligned}$$

$$f(0) = 0$$

$$\begin{aligned} f(2) &= (2)^4 - 4(2)^3 \\ &= -16 \end{aligned}$$

Possible POI's $\Rightarrow f''(x) = 0$:

$$x = 0, x = 2$$

$\therefore$ The function is concave up on $(-\infty, 0) \cup (2, \infty)$ and concave down on $(0, 2)$. There is a POI at $(0, 0)$ and $(2, -16)$.

The Second Derivative Test (for Relative Extrema)

Let f be a function such that $x = c$ is a critical value of f such that $f'(c) = 0$. If $f''(x)$ exists on an open interval containing $x = c$, then:

- 1) If $f''(c) > 0$, then $(c, f(c))$ is a relative **minimum**. 
- 2) If $f''(c) < 0$, then $(c, f(c))$ is a relative **maximum**. 
- 3) If $f''(c) = 0$, then the test fails and the First Derivative Test must be used.

Example 4: Find the coordinates of the relative extrema for $f(x) = -3x^5 + 5x^3$ using the 2nd Derivative Test, if possible, and locate any inflection point(s). Sketch the graph.

$$\begin{aligned} f'(x) &= -15x^4 + 15x^2 \\ &= -15x^2(x^2 - 1) \\ &= -15x^2(x+1)(x-1) \end{aligned}$$

Possible POI's $\Rightarrow f''(x) = 0$:

$$\begin{aligned} 0 &= -30x(2x^2 - 1) \\ x &= 0, \quad 2x^2 - 1 = 0 \\ x &= \pm \frac{1}{\sqrt{2}} \end{aligned}$$

critical #s $\Rightarrow f'(x) = 0$:

$$x = -1, 0, 1$$

2nd Derivative Test for extrema:

$$f''(x) = -60x^3 + 30x$$

$$\begin{aligned} f''(-1) &= -60(-1)^3 + 30(-1) \\ &= 30 \quad \leftarrow f''(-1) > 0 \\ &\therefore \text{min at } x = -1 \end{aligned}$$

$$f''(0) = 0 \quad \leftarrow \text{SD Test fails}$$

$$\begin{aligned} f''(1) &= -60(1)^3 + 30(1) \\ &= -30 \quad \leftarrow f''(1) < 0 \\ &\therefore \text{max at } x = 1 \end{aligned}$$

First Derivative Test for extrema:

Points:

$$\begin{aligned} f(-1) &= -3(-1)^5 + 5(-1)^3 = -2 \quad \text{min} \\ f(0) &= 0 \quad \text{POI} \\ f(1) &= -3(1)^5 + 5(1)^3 = 2 \quad \text{max} \\ f(-\frac{1}{\sqrt{2}}) &= -3(-\frac{1}{\sqrt{2}})^5 + 5(-\frac{1}{\sqrt{2}})^3 \approx 1.24 \quad \text{POI} \\ f(\frac{1}{\sqrt{2}}) &= -3(\frac{1}{\sqrt{2}})^5 + 5(\frac{1}{\sqrt{2}})^3 \approx 1.24 \quad \text{POI} \end{aligned}$$

Example 5: The graph of the derivative, $f'(x)$, of two continuous functions, $f(x)$, on the interval $[0, 9]$ are shown below.

I.

II.

Answer the following questions for each.

- (a) On what open intervals is $f(x)$ increasing or decreasing?

$f(x)$ is increasing when $f'(x) > 0$ and decreasing when $f'(x) < 0$.

I. increasing on $(1, 6) \cup (8, 9)$
decreasing on $(0, 1) \cup (6, 8)$

II. increasing on $(0, 2) \cup (4, 6) \cup (8, 9)$
decreasing on $(2, 4) \cup (6, 8)$

- (b) At what value(s) of x does $f(x)$ have a local maximum or local minimum?

Look for values where $f'(x) = 0$:

I) $f'(x)$ $\begin{array}{c} - & + & - & + \\ 0 & 1 & 3 & 6 & 8 & 9 \end{array}$
 $f(x)$ $\begin{array}{c} \downarrow & \uparrow & \downarrow & \uparrow \\ 0 & 1 & 3 & 6 & 8 & 9 \end{array}$
Local max at $x = 6$
Local min at $x = 1, x = 8$

II) $f'(x)$ $\begin{array}{c} + & - & + & - & + \\ 0 & 2 & 4 & 6 & 8 & 9 \end{array}$
 $f(x)$ $\begin{array}{c} \uparrow & \downarrow & \uparrow & \downarrow & \uparrow \\ 0 & 2 & 4 & 6 & 8 & 9 \end{array}$
Local max at $x = 2, x = 6$
Local min at $x = 4, x = 8$

- (c) On what intervals is $f(x)$ concave up or concave down?

Look for $f''(x) > 0$ for concave up and $f''(x) < 0$ for concave down.

$f''(x)$ $\begin{array}{c} + & - & + & - & + \\ 0 & 2 & 3 & 5 & 7 & 9 \end{array}$
 $f(x)$ $\begin{array}{c} cu & cd & cu & cd & cu \\ 0 & 2 & 3 & 5 & 7 & 9 \end{array}$
I) concave up on $(0, 2) \cup (3, 5) \cup (7, 9)$
concave down on $(2, 3) \cup (5, 7)$

$f''(x)$ $\begin{array}{c} - & + & - & + \\ 0 & 3 & 6 & 9 \end{array}$
 $f(x)$ $\begin{array}{c} cd & cu & cd & cu \\ 0 & 3 & 6 & 9 \end{array}$
II) concave up on $(3, 6) \cup (6, 9)$
concave down on $(0, 3)$

- (d) Assuming that $f(0) = 0$, sketch a graph of $f(x)$.

Cusps

A cusp is a pointy bend on a graph where no tangent line exists. A cusp is a good example of the situation where a function can have a maximum or minimum at a point where the derivative of the function does not exist. To spot a cusp, determine where the derivative does not exist and test the concavity on either side of that critical number. If the concavity remains the same, you have found a cusp. If the concavity changes, you have found a vertical tangent.

cusp (minimum)

cusp (maximum)

vertical tangent

Example 1: Determine if the following functions have a cusp. If yes, determine the point.

a) $f(x) = (x+6)^{\frac{1}{2}} - 2$ (Note: Domain $x \geq -6$)

$$f'(x) = \frac{1}{2}(x+6)^{-\frac{1}{2}}$$

$$f''(x) = -\frac{1}{4}(x+6)^{-\frac{3}{2}} \\ = \frac{-1}{4(x+6)^{\frac{3}{2}}}$$

$$f''(x) \quad \text{---} \\ \bullet \quad \text{---} \rightarrow \infty \\ -6 \quad \text{CD} \\ f(x)$$

Possible POI's $\Rightarrow f''(x)$ DNE:

$$(x+6)^{\frac{3}{2}} = 0 \\ x = -6$$

$\therefore$ There are no cusps.

b) $f(x) = \sqrt[3]{x^2} \rightarrow f(x) = x^{\frac{2}{3}}$

$$f'(x) = \frac{2}{3}x^{-\frac{1}{3}} \text{ or } \frac{2}{3x^{\frac{1}{3}}}$$

$$f''(x) = -\frac{2}{9}x^{-\frac{4}{3}} \text{ or } \frac{-2}{9x^{\frac{4}{3}}}$$

$$f''(x) \quad \text{---} \quad \downarrow \quad \text{---} \\ \bullet \quad \text{---} \rightarrow \infty \\ -\infty \quad 0 \quad \infty \\ f(x) \quad \text{CD} \quad \text{Cusp at } x=0 \quad \text{CD}$$

$$f(0) = (0)^{\frac{2}{3}} \\ = 0$$

$\therefore$ There is a cusp at $(0,0)$.

Possible POIs $\rightarrow f''(x)$ DNE

$$9x^{\frac{4}{3}} = 0 \\ x = 0$$

4-4 Warm Up

1. The function $f(x) = 2ax^3 + 3x^2 + bx - 3$ has a local minimum at $x = -1$ and a point of inflection at $x = 1$. Determine the values of a and b .

$$f'(x) = 6ax^2 + 6x + b$$

$$f'(-1) = 0 \Rightarrow 0 = 6a(-1)^2 + 6(-1) + b$$
$$6 = 6a + b \rightarrow \textcircled{1}$$

$$f''(x) = 12ax + 6$$

$$f''(1) = 0 \Rightarrow 0 = 12a(1) + 6$$
$$-6 = 12a$$
$$-\frac{1}{2} = a$$

Sub $a = -\frac{1}{2}$ into $\textcircled{1}$:

$$6 = 6\left(-\frac{1}{2}\right) + b$$

$$6 = -3 + b$$

$$9 = b$$

$$\therefore a = -\frac{1}{2} \text{ and } b = 9$$

2. Use the 2nd Derivative Test to determine the coordinates of the local extrema of the function

$$f(x) = 3x^4 - x^3 - 6x^2 + 3x - 11.$$

$$f'(x) = 12x^3 - 3x^2 - 12x + 3$$
$$= 3(4x^3 - x^2 - 4x + 1)$$
$$= 3[x^2(4x - 1) - (4x - 1)]$$
$$= 3(4x - 1)(x + 1)(x - 1)$$

critical #s $\Rightarrow f'(x) = 0$:

$$x = \frac{1}{4}, -1, 1$$

Second Derivative Test:

$$f''(x) = 36x^2 - 6x - 12$$

$$f''\left(\frac{1}{4}\right) = 36\left(\frac{1}{4}\right)^2 - 6\left(\frac{1}{4}\right) - 12$$
$$= -\frac{45}{4} \therefore f''\left(\frac{1}{4}\right) < 0 \therefore \text{max}$$

$$f(-1) = 36(-1)^2 - 6(-1) - 12$$
$$= 30 \therefore f''(-1) > 0 \therefore \text{min}$$

$$f''(1) = 36(1)^2 - 6(1) - 12$$
$$= 18 \therefore f''(1) > 0 \therefore \text{min}$$

Coordinates:

$$f\left(\frac{1}{4}\right) = 3\left(\frac{1}{4}\right)^4 - \left(\frac{1}{4}\right)^3 - 6\left(\frac{1}{4}\right)^2 + 3\left(\frac{1}{4}\right) - 11$$
$$= -\frac{2721}{256}$$

$$f(-1) = 3(-1)^4 - (-1)^3 - 6(-1)^2 + 3(-1) - 11$$
$$= -16$$

$$f(1) = 3(1)^4 - (1)^3 - 6(1)^2 + 3(1) - 11$$
$$= -12$$

$\therefore$ local max at $\left(\frac{1}{4}, -\frac{2721}{256}\right)$ and

local mins at $(-1, -16)$ and $(1, -12)$.

Solving Optimization Problems

Strategies:

1. Whenever possible, draw a diagram, labeling the given and required quantities. Identify the variables.
2. Determine a function that represents the quantity to be optimized. Be sure that this function only depends on one variable. (If there are two variables, look for information to create a second equation.)
3. Differentiate and find the critical number (i.e. find the maximum or minimum function value) by setting the first derivative to zero.
4. Determine the optimal value and check constraints.
5. Answer the question in your conclusion.

Number Type

1. Express 24 as the sum of 2 positive numbers such that the product of one by the square of the other is a maximum.

Let x and y be the 2 positive numbers and P be the product.

$$x+y=24$$

$$x=24-y \text{ ①}$$

$$P=xy^2 \text{ ②}$$

sub ① into ②:

$$\begin{aligned} P &= (24-y)y^2 \\ &= 24y^2 - y^3 \end{aligned}$$

Differentiate: $P' = 48y - 3y^2$

Critical #s: $0 = 48y - 3y^2$
 $0 = 3y(16-y)$

$$\therefore y=0 \text{ or } y=16$$

2nd Derivative Test:

$$P'' = -6y + 48$$

P'' at $y=0$:

$$\begin{aligned} P'' &= -6(0) + 48 \\ &= 48 \quad \therefore P'' > 0 \therefore \text{min} \end{aligned}$$

P'' at $y=16$:

$$\begin{aligned} P'' &= -6(16) + 48 \\ &= -48 \quad \therefore P'' < 0 \therefore \text{max} \end{aligned}$$

$$\text{When } y=16, \quad x = 24 - (16) = 8$$

$$\therefore P = (8)(16)^2 = 2048$$

$\therefore$ The two numbers are 8 and 16 and the max product is 2048.

Optimization: Area and Perimeter

1. Three hundred meters of fencing is available to enclose a rectangular field and divide it into two smaller equal plots. What should the dimensions of the smaller plots be for the area to be a maximum?

$$4w + 3l = 300$$

$$l = 100 - \frac{4}{3}w \quad (1)$$

$$A = 2lw \quad (2)$$

Let w and l represent the width and the length of each plot, respectively, and A represent the total area.

sub (1) into (2):

$$\begin{aligned} A &= 2\left(100 - \frac{4}{3}w\right)w \\ &= 200w - \frac{8}{3}w^2 \end{aligned}$$

$$A' = 200 - \frac{16}{3}w$$

critical #s $\rightarrow A' = 0$

$$0 = 200 - \frac{16}{3}w$$

$$w = \frac{75}{2}$$

2nd derivative test:

$$A'' = -\frac{16}{3} \quad \therefore A'' < 0 \quad \therefore \text{max}$$

$$\text{When } w = \frac{75}{2},$$

$$\begin{aligned} l &= 100 - \frac{4}{3}\left(\frac{75}{2}\right) \\ &= 50 \end{aligned}$$

$\therefore$ The width should be 37.5m and the length should be 50m for the max area.

2. A Norman window consists of a rectangle surmounted by a semi-circle. If the perimeter of the window is 8m, find the width of the window that will admit the greatest amount of light.

Let $2x$ represent the width and let y represent the height.

Let A be the area and P be the perimeter.

$$P = 2x + 2y + \frac{1}{2}(2\pi x)$$

$$\therefore P = 8,$$

$$8 = 2x + 2y + \pi x$$

$$y = \frac{8 - 2x - \pi x}{2} \quad (1)$$

$$A = 2xy + \frac{1}{2}\pi x^2$$

sub (1) into A :

$$A = 2x\left(\frac{8 - 2x - \pi x}{2}\right) + \frac{1}{2}\pi x^2$$

$$= 8x - 2x^2 - \pi x^2 + \frac{1}{2}\pi x^2$$

$$= 8x - 2x^2 - \frac{1}{2}\pi x^2$$

$$A' = 8 - 4x - \pi x$$

critical #s $\Rightarrow A' = 0$:

$$0 = 8 - 4x - \pi x$$

$$8 = x(4 + \pi)$$

$$x = \frac{8}{4 + \pi}$$

$$\therefore \text{width} = 2x$$

$$= \frac{16}{4 + \pi}$$

2nd derivative test:

$$A'' = -4 - \pi$$

$$A'' < 0 \quad \therefore \text{Always } \text{CD} \quad \therefore \text{max}$$

$\therefore$ The width of the window is $\frac{16}{4 + \pi}$ or approx. 2.24 m.

Optimization: Surface Area and Volume

1. A piece of sheet metal 24 cm by 24 cm is to be used to make a rectangular box with an open top. The box is to be made by cutting equal squares from the corners and folding up the flap to make the sides. Find the dimensions that will give the box with the largest volume.

Let x represent the side length of the squares that will be cut and V be the volume to be maximized.

$$\begin{aligned} V &= lwh \\ &= (24-2x)(24-2x)(x) \\ &= (24-2x)^2(x) \end{aligned}$$

$$\begin{aligned} V' &= 2(24-2x)(-2)(x) + (24-2x)^2 \\ &= (24-2x)(-4x+24-2x) \\ &= (24-2x)(-6x+24) \end{aligned}$$

Critical #s $\rightarrow V' = 0$

$$0 = (24-2x)(-6x+24)$$

$$\therefore 24-2x=0 \quad \text{or} \quad -6x+24=0$$

$$x=12$$

$$x=4$$

$\rightarrow$ inadmissible

$\therefore$ side lengths will be 0.

$$\begin{aligned} \text{Side lengths} &= 24-2x \\ &= 24-2(4) \\ &= 16 \end{aligned}$$

$$\begin{aligned} V &= (16)^2(4) \\ &= 1024 \end{aligned}$$

2nd derivative test:

$$\begin{aligned} V'' &= (-2)(-6x+24) + (24-2x)(-6) \\ &= 12x - 48 - 144 + 12x \\ &= 24x - 192 \end{aligned}$$

At $x=4$,

$$\begin{aligned} V'' &= 24(4) - 192 \\ &= -96 \quad \therefore V'' < 0 \\ &\quad \therefore \text{max} \end{aligned}$$

$\therefore$ The greatest volume for the box is 1024 cm^3 and the sides and height will be 16cm and 4cm, respectively.

2. A manufacturer wishes to produce cylindrical fruit juice cans with a capacity of 250 mL. What dimensions will minimize the amount of material required for a can? (1 mL = 1 cm³)

Let r be the radius, h be the height, V be the volume and A be the surface area of the can.

$$V = 250 \text{ mL} \\ = 250 \text{ cm}^3$$

$$V = \pi r^2 h$$

$$250 = \pi r^2 h$$

$$\frac{250}{\pi r^2} = h \quad \text{①}$$

$$A = 2\pi r h + 2\pi r^2 \quad \text{②}$$

sub ① into ②:

$$A = 2\pi r \left(\frac{250}{\pi r^2} \right) + 2\pi r^2$$

$$= \frac{500}{r} + 2\pi r^2$$

$$A' = -\frac{500}{r^2} + 4\pi r$$

critical #s $\rightarrow A' = 0$

$$0 = -\frac{500}{r^2} + 4\pi r$$

$$0 = -500 + 4\pi r^3$$

$$r^3 = \frac{500}{4\pi}$$

$$r = 5\pi^{-\frac{1}{3}} \quad \text{or} \quad \frac{5}{\sqrt[3]{\pi}}$$

$$\text{At } r = \frac{5}{\sqrt[3]{\pi}},$$

$$h = \frac{250}{\pi \left(\frac{5}{\sqrt[3]{\pi}} \right)^2}$$

$$= \frac{250}{\frac{25\pi}{\pi^{\frac{2}{3}}}}$$

$$= \frac{10}{\sqrt[3]{\pi}}$$

2nd derivative test:

$$A'' = \frac{1000}{r^3} + 4\pi$$

$$\text{At } r = \frac{5}{\sqrt[3]{\pi}}$$

$$A'' = \frac{1000}{\left(\frac{5}{\sqrt[3]{\pi}} \right)^3} + 4\pi$$

$$= 12\pi \quad \because A'' > 0 \\ \therefore \text{min}$$

$\therefore$ The amount of material will be minimized when the radius is $\frac{5}{\sqrt[3]{\pi}}$ cm and the height is $\frac{10}{\sqrt[3]{\pi}}$ cm.

OPTIMIZING INSCRIBED SHAPES

Some important formulae:

$$V_{\text{cone}} = \frac{1}{3}\pi r^2 h$$

$$V_{\text{sphere}} = \frac{4}{3}\pi r^3$$

$$V_{\text{cylinder}} = \pi r^2 h$$

$$V_{\text{prism}} = A_{\text{base}} \times h$$

$$SA_{\text{sphere}} = 4\pi r^2$$

$$1 \text{ cm}^3 = 1 \text{ mL}$$

1. Find the dimensions of the rectangle of largest area which can be inscribed in the closed region bound by the x-axis, $x = 9$ and the graph $y = \sqrt{x}$.

Let $9-x$ be the length and $\sqrt{x}$ be the width of the inscribed rectangle.

$$A = lw$$

$$A(x) = (9-x)(\sqrt{x})$$

$$A'(x) = (-1)(\sqrt{x}) + (9-x)\left(\frac{1}{2}x^{-\frac{1}{2}}\right)$$

$$\text{critical \#s} \rightarrow A'(x) = 0:$$

$$0 = -\sqrt{x} + \frac{9-x}{2\sqrt{x}}$$

$$0 = -2x + 9 - x$$

$$0 = -3x + 9$$

$$3x = 9$$

$$x = 3$$

2nd derivative test:

$$A'(x) = -\sqrt{x} + \frac{9}{2}x^{-\frac{1}{2}} - \frac{1}{2}x^{\frac{1}{2}}$$

$$A''(x) = -\frac{1}{2}x^{-\frac{1}{2}} - \frac{9}{4}x^{-\frac{3}{2}} - \frac{1}{4}x^{-\frac{1}{2}}$$

$$A''(3) = -0.866$$

$$\therefore A'' < 0 \therefore \text{max}$$

$$\begin{aligned} l &= 9-x \\ &= 9-(3) \\ &= 6 \end{aligned}$$

$$\begin{aligned} w &= \sqrt{x} \\ &= \sqrt{3} \end{aligned}$$

$\therefore$ The rectangle has a length of 6 units and a width of $\sqrt{3}$ units.

2. Determine the dimensions of the largest cone which can be inscribed in a sphere, where the diameter of the sphere is fixed at 30 cm.

Let h be the height, r be the radius and V be the volume of the cone.

$$\begin{aligned} r^2 &= 15^2 - (h-15)^2 \\ &= 225 - h^2 + 30h - 225 \\ r^2 &= -h^2 + 30h \end{aligned}$$

$$V = \frac{1}{3} \pi r^2 h$$

$$\begin{aligned} V(h) &= \frac{1}{3} \pi (-h^2 + 30h) h \\ &= -\frac{1}{3} \pi h^3 + 10\pi h^2 \end{aligned}$$

$$V'(h) = -\pi h^2 + 20\pi h$$

$$\text{critical \#s} \rightarrow V'(h) = 0$$

$$0 = -\pi h(h-20)$$

$$\therefore h=0 \text{ or } h=20$$

↑
inadmissible
• $h > 0$

2nd derivative test:

$$V''(h) = -2\pi h + 20\pi$$

$$V''(20) = -20\pi$$

$$\therefore V''(20) < 0 \therefore \text{max}$$

$$r^2 = -(20)^2 + 30(20)$$

$$r = 10\sqrt{2}$$

$\therefore$ The largest cone has a height of 20cm and a radius of $10\sqrt{2}$ cm.

3. Find the dimensions of the largest rectangle which can be inscribed in a circle, where the area of the circle is fixed at $100\pi \text{ cm}^2$.

Let x represent the length, y represent the height, $2r$ represent the diagonal and A represent the area of the rectangle.

$$A = xy$$

$$A(x) = x(\sqrt{400 - x^2})$$

$$A'(x) = (1)(\sqrt{400 - x^2}) + x\left(\frac{1}{2}\right)(400 - x^2)^{-\frac{1}{2}}(-2x)$$

$$= \sqrt{400 - x^2} - \frac{x^2}{\sqrt{400 - x^2}}$$

$$\text{critical \#s} \rightarrow A'(x) = 0$$

$$0 = \sqrt{400 - x^2} - \frac{x^2}{\sqrt{400 - x^2}}$$

$$0 = 400 - x^2 - x^2$$

$$0 = -2x^2 + 400$$

$$2x^2 = 400$$

$$x = 10\sqrt{2}, -10\sqrt{2} \leftarrow \text{inadmissible}$$

$$\begin{aligned} y &= \sqrt{400 - (10\sqrt{2})^2} \\ &= 10\sqrt{2} \end{aligned}$$

2nd derivative test

$$\begin{aligned} A''(x) &= \frac{1}{2}(400 - x^2)^{-\frac{1}{2}}(-2x) - 2x(400 - x^2)^{-\frac{3}{2}} \\ &\quad - x^2\left(\frac{1}{2}\right)(400 - x^2)^{-\frac{3}{2}}(-2x) \end{aligned}$$

$$A''(10\sqrt{2}) = -4$$

$$\therefore A''(10\sqrt{2}) < 0 \therefore \text{max}$$

$\therefore$ the largest rectangle is $10\sqrt{2} \times 10\sqrt{2}$ cm

$$A_{\text{circle}} = \pi r^2$$

$$100\pi = \pi r^2$$

$$10 = r$$

$$x^2 + y^2 = (2r)^2$$

$$x^2 + y^2 = 400$$

$$y = \sqrt{400 - x^2}$$

4. Find the dimensions of the cylinder of greatest volume which can be inscribed in a sphere, where the volume of the sphere is fixed at $\frac{108\pi}{3} m^3$.

Let h be the height, r be the radius and V be the volume of the cylinder. Let R be the radius of the sphere.

$$V_{\text{sphere}} = \frac{4}{3}\pi R^3$$

$$\frac{108\pi}{3} = \frac{4}{3}\pi R^3$$

$$R^3 = 27$$

$$R = 3$$

$$r^2 + \left(\frac{h}{2}\right)^2 = R^2$$

$$r^2 + \frac{h^2}{4} = 9$$

$$r^2 = 9 - \frac{h^2}{4}$$

$$V_{\text{cylinder}} = \pi r^2 h$$

$$V(h) = \pi \left(9 - \frac{h^2}{4}\right) h$$

$$= 9\pi h - \frac{\pi}{4} h^3$$

$$V'(h) = 9\pi - \frac{3\pi}{4} h^2$$

$$V'(h) = 0:$$

$$0 = 9\pi - \frac{3\pi}{4} h^2$$

$$\frac{3\pi}{4} h^2 = 9\pi$$

$$h^2 = 9\pi \times \frac{4}{3\pi}$$

$$h^2 = 12$$

$$h = 2\sqrt{3}, -2\sqrt{3}$$

↑
inadmissible
 $\because h > 0$

2nd derivative test:

$$V''(h) = -\frac{3}{2}\pi h$$

$$V''(2\sqrt{3}) = -3\sqrt{3}\pi$$

or -16.3

$$\therefore r^2 = 9 - \frac{(2\sqrt{3})^2}{4}$$

$$r = \sqrt{6}$$

$\therefore$ The cylinder with the greatest volume has a height of $2\sqrt{3}$ m and a radius of $\sqrt{6}$ m.

OPTIMIZING AREA & VOLUME

1. Determine the dimensions of the largest cone which can be inscribed in a sphere, where the diameter of the sphere is fixed at 30 cm . [Answer: $r = 10\sqrt{2}\text{ cm}$, $h = 20\text{ cm}$]
2. Find the dimensions of the largest rectangle, by perimeter, which can be inscribed in a circle, where the area of the circle is fixed at $100\pi\text{ cm}^2$. [Answer: $10\sqrt{2}\text{ cm} \times 10\sqrt{2}\text{ cm}$]
3. Find the dimensions of the cylinder of greatest volume which can be inscribed in a sphere, where the volume of the sphere is fixed at $\frac{108\pi}{3}\text{ m}^3$. [Answer: $r = \sqrt{6}\text{ cm}$, $h = 2\sqrt{3}\text{ cm}$]
4. Find the dimensions of the rectangle of maximum perimeter that can be inscribed in a circle of radius 4 cm . [Answer: $4\sqrt{2}\text{ cm}$ by $4\sqrt{2}\text{ cm}$]
5. Find the dimensions of the rectangle of maximum area that can be inscribed in an isosceles triangle with base 40 cm and height 30 cm . [Answer: 15 cm by 20 cm]
6. Find the dimensions of the cylinder of maximum volume that can be inscribed in a cone with a diameter of 40 cm and a height of 30 cm . [Answer: $h = 10\text{ cm}$, $r = \frac{40}{3}\text{ cm}$]
7. Find the height and radius of the cylinder of greatest volume that can be inscribed in a sphere of radius R units. [Answer: $h = \frac{2\sqrt{3}R}{3}$, $r = \frac{\sqrt{6}R}{3}$]
8. A rectangular box is made from a piece of cardboard which measures 48 cm by 18 cm by cutting equal squares from each corner and turning up the sides. Find the maximum volume of such a box if:
 - a) the height of the box must be at most 3 cm . [Answer: 1512 cm^3]
 - b) the length and width of the base must be at least 10 cm . [Answer: 1600 cm^3]
9. A piece of paper for a poster has an area of 1 m^2 . The margins at the top and bottom are 8 cm and at the sides are 6 cm . What are the dimensions of the sheet of paper which will maximize the printed area of the page? [Answer: $\frac{2\sqrt{3}}{3}\text{ m}$ by $\frac{2\sqrt{3}}{3}\text{ m}$]
10. The area of a rectangle is 64 cm^2 . Find the dimensions of the rectangle of minimum perimeter. What is the minimum perimeter? [Answer: 8 cm by 8 cm ; 32 cm]
11. A piece of wire 100 cm long is divided into two pieces. One piece is used to form a circle and the other a square. Find the lengths of wire cut so that the combined area of circle and square is a minimum. [Answer: 43.99 cm and 56.01 cm]
12. In above question, into what lengths should the wire be divided to give a combined area as large as possible? [Answer: one piece of wire 100 cm long forming a circle]
13. An eaves trough has a cross section that forms an isosceles trapezoid. If the two legs and the short base of the trapezoid are each 10 cm , find the distance across the top of the trapezoid that will maximize the area of the trapezoid and thus the carrying capacity of the eaves trough. [Answer: base of 20 cm]

OPTIMIZING AREA & VOLUME

Solution

1. Determine the dimensions of the largest cone which can be inscribed in a sphere, where the diameter of the sphere is fixed at 30 cm .

$$V = \frac{1}{3} \pi r^2 h$$

$$15^2 = r^2 + (h-15)^2, \quad 0 < h-15 < 15 \rightarrow 0 < h < 30$$

$$r^2 = 225 - (h-15)^2$$

$$V(h) = \frac{1}{3} \pi r^2 h = \frac{1}{3} \pi h [225 - (h-15)^2] ; 0 < h < 30$$

$$V(h) = \frac{1}{3} \pi (-h^3 + 30h^2)$$

$$V'(h) = \frac{1}{3} \pi (-3h^2 + 60h) = 0$$

$$-3h(h-20) = 0 \rightarrow h = 20 \text{ cm}$$

$$h = 20 \rightarrow r = \sqrt{225 - 25}$$

$$r = \sqrt{200}$$

$$r = 10\sqrt{2} \text{ cm}$$

2. Find the dimensions of the largest rectangle, by perimeter, which can be inscribed in a circle, where the area of the circle is fixed at $100\pi \text{ cm}^2$.

$$A = pr^2 = 100p$$

$$r^2 = 100 \rightarrow r = 10 \text{ cm}$$

$$x^2 + y^2 = 400 \rightarrow y = \sqrt{400 - x^2}$$

$$P = 2x + 2y$$

$$P(x) = 2x + 2\sqrt{400 - x^2}, \quad 0 < x < 20$$

$$P'(x) = 0 : 2 - \frac{4x}{2\sqrt{400 - x^2}} = 0$$

$$\sqrt{400 - x^2} = x$$

$$400 - x^2 = x^2$$

$$400 = 2x^2$$

$$200 = x^2$$

$$x = 10\sqrt{2} \text{ cm}, \quad y = 10\sqrt{2} \text{ cm}$$

3. Find the dimensions of the cylinder of greatest volume which can be inscribed in a sphere, where the volume of the sphere is fixed at $\frac{108\pi}{3} m^3$.

$$V_{sphere} = \frac{4}{3}\pi R^3 = \frac{108\pi}{3}$$

$$R^3 = 27 \rightarrow R = 3 \text{ cm}$$

$$V_{cylinder} = \pi r^2 h$$

$$9 = r^2 + \left(\frac{h}{2}\right)^2 \rightarrow r^2 = 9 - \frac{h^2}{4} ; \quad 0 < h < 6$$

$$V(h) = \pi \left(9 - \frac{h^2}{4}\right) h ; 0 < h < 6$$

$$V'(h) = \pi \left(9 - \frac{3h^2}{4}\right) = 0 \rightarrow h^2 = 12 \rightarrow h = 2\sqrt{3} \text{ cm}$$

$$r = \sqrt{6} \text{ cm}$$

4. Find the dimensions of the rectangle of maximum perimeter that can be inscribed in a circle of radius 4 cm.

$$P = 2(x + y)$$

$$x^2 + y^2 = 8^2 \rightarrow y = \sqrt{64 - x^2}$$

$$P(x) = 2\left(x + \sqrt{64 - x^2}\right), 0 < x < 8$$

$$P'(x) = 2\left(1 + \frac{-2x}{2\sqrt{64 - x^2}}\right)$$

$$P'(x) = 0 \rightarrow 1 = \frac{x}{\sqrt{64 - x^2}}$$

$$\sqrt{64 - x^2} = x$$

$$64 - x^2 = x^2$$

$$64 = 2x^2$$

$$32 = x^2$$

$$x = 4\sqrt{2} \text{ cm} \rightarrow y = 4\sqrt{2} \text{ cm}$$

5. Find the dimensions of the rectangle of maximum area that can be inscribed in an isosceles triangle with base 40 cm and height 30 cm.

Similar triangles:

$$A = 2xy$$

$$\frac{x}{20} = \frac{30-y}{30} \rightarrow 30x = 20(30-y)$$

$$3x = 2(30-y)$$

$$x = \frac{2}{3}(30-y)$$

$$A(y) = \frac{4}{3}(30-y)y, \quad 0 < y < 30$$

$$A(y) = 40y - \frac{4}{3}y^2$$

$$A'(y) = 40 - \frac{8}{3}y$$

$$A'(y) = 0 \rightarrow 40 = \frac{8}{3}y$$

$$y = 15\text{ cm} \rightarrow x = 10\text{ cm}$$

6. Find the dimensions of the cylinder of maximum volume that can be inscribed in a cone with a diameter of 40 cm and a height of 30 cm.

similar triangles:

$$\frac{30-h}{30} = \frac{r}{20} \rightarrow 3r = 2(30-h)$$

$$r = \frac{2}{3}(30-h) \rightarrow \text{sub into } V:$$

$$V = \pi r^2 h$$

$$V(h) = \pi h \left(\frac{2}{3}(30-h) \right)^2, \quad 0 < h < 30$$

$$V(h) = \frac{4}{9}\pi h(30-h)^2$$

$$V'(h) = 0 \rightarrow (30-h)^2 + 2(30-h)(-1)h = 0$$

$$(30-h)(30-h-2h) = 0$$

$$h = 30 \quad \text{or} \quad h = 10$$

$$\swarrow \quad \searrow$$

$$r = 0 \quad \text{or} \quad r = \frac{40}{3}$$

7. Find the height and radius of the cylinder of greatest volume that can be inscribed in a sphere of radius R units.

$$V_{\text{cylinder}} = \pi r^2 h$$

$$R^2 = r^2 + \left(\frac{h}{2}\right)^2 \rightarrow r^2 = R^2 - \frac{h^2}{4} ; \quad 0 < h < 2R$$

$$V(h) = \pi \left(R^2 - \frac{h^2}{4} \right) h ; \quad 0 < h < 2R$$

$$V'(h) = \pi \left(R^2 - \frac{3h^2}{4} \right) = 0 \rightarrow h^2 = \frac{4R^2}{3} \rightarrow h = \frac{2R\sqrt{3}}{3}$$

$$r = \frac{R\sqrt{6}}{3}$$

8. A rectangular box is made from a piece of cardboard which measures 48 cm by 18 cm by cutting equal squares from each corner and turning up the sides. Find the maximum volume of such a box if:
- the height of the box must be at most 3 cm.
 - the length and width of the base must be at least 10 cm.

a)

$$V(x) = (48 - 2x)(18 - 2x)x, \quad 0 \leq x \leq 3$$

$$V(x) = 4x^3 - 132x^2 + 864x$$

$$V'(x) = 12x^2 - 264x + 864$$

$$V'(x) = 0 \rightarrow 12(x^2 - 22x + 72) = 0$$

$$12(x - 4)(x - 18) = 0$$

$$x = 4 \text{ or } x = 18$$

$$V(0) = 0$$

$$V(3) = 1512 \text{ cm}^3$$

$\therefore$ Maximum volume when $x=3$

b)

$$48 - 2x \geq 10 \rightarrow 38 \geq 2x \rightarrow x \leq 19$$

$$18 - 2x \geq 10 \rightarrow 8 \geq 2x \rightarrow x \leq 4$$

$$V(4) = 1600 \text{ cm}^3$$

$\therefore$ Maximum volume when $x=4$

9. A piece of paper for a poster has an area of 1 m^2 . The margins at the top and bottom are 8 cm and at the sides are 6 cm. What are the dimensions of the sheet of paper which will maximize the printed area of the page?

$$xy = 1 \rightarrow y = \frac{1}{x}$$

$$A = (x - 0.12)(y - 0.16)$$

$$A(x) = (x - 0.12)\left(\frac{1}{x} - 0.16\right), 0 < x \leq 1$$

$$A'(x) = 0 \rightarrow \left(\frac{1}{x} - 0.16\right) + \left(\frac{-1}{x^2}\right)(x - 0.12) = 0$$

$$\frac{1}{x} - 0.16 + \frac{-1}{x^2} + \frac{0.12}{x^2} = 0$$

$$\frac{0.12}{x^2} = 0.16$$

$$x^2 = \frac{0.12}{0.16}$$

$$x^2 = \frac{3}{4}$$

$$x = \frac{\sqrt{3}}{2}, y = \frac{2\sqrt{3}}{2}$$

10. The area of a rectangle is 64 cm^2 . Find the dimensions of the rectangle of minimum perimeter. What is the minimum perimeter?

$$A = xy = 64 \text{ cm}^2 \rightarrow y = \frac{64}{x}$$

$$P = 2(x + y)$$

$$P(x) = 2\left(x + \frac{64}{x}\right), 0 < x$$

$$P'(x) = 2\left(1 - \frac{64}{x^2}\right)$$

$$P'(x) = 0 \rightarrow 64 = x^2$$

$$x = 8, y = 8$$

$$P(8) = 32 \text{ cm}$$

11. A piece of wire 100 cm long is divided into two pieces. One piece is used to form a circle and the other a square. Find the lengths of wire cut so that the combined area of circle and square is a minimum.

Let x be the circumference of circle and $100 - x$ be

square: $s = \frac{100 - x}{4}$, where s is the length side of square

circle: $x = 2\pi r \rightarrow r = \frac{x}{2\pi}$

$$A = s^2 + \pi r^2$$

$$A(x) = \left(\frac{100 - x}{4}\right)^2 + \pi \left(\frac{x}{2\pi}\right)^2, \quad 0 \leq x \leq 100$$

$$A'(x) = 0 \rightarrow 2\left(\frac{100 - x}{4}\right)\left(\frac{-1}{4}\right) + \frac{x}{2\pi} = 0$$

$$\frac{100 - x}{4} = \frac{x}{\pi}$$

$$100\pi - \pi x = 4x$$

$$100\pi = \pi x + 4x$$

$$100\pi = x(\pi + 4)$$

$$x = \frac{100\pi}{\pi + 4} \doteq 44 \text{ cm}$$

$$A(0) = 625 \text{ cm}^2$$

$$A\left(\frac{100\pi}{\pi + 4}\right) \doteq 392.2 \text{ cm}^2 \rightarrow \text{abs.min}$$

$$A(100) \doteq 3183 \text{ cm}^2 \rightarrow \text{abs.max}$$

Abs min occurs when the dimensions are 43.99cm and 56.01cm

12. In above question, into what lengths should the wire be divided to give a combined area as large as possible?

one piece of wire 100 cm long forming a circle

13. An eaves trough has a cross section that forms an isosceles trapezoid. If the two legs and the short base of the trapezoid are each 10 cm, find the distance across the top of the trapezoid that will maximize the area of the trapezoid and thus the carrying capacity of the eaves trough.

$$A = 0.5a(b_1 + b_2)$$

$$c^2 = a^2 + x^2$$

$$10^2 = a^2 + x^2$$

$$A = \sqrt{100 - x^2}$$

$$A = 0.5(\sqrt{100 - x^2})(20 + 2x)$$

$$A = (\sqrt{100 - x^2})(10 + x)$$

$$A' = \frac{1}{2}(100 - x^2)^{-\frac{1}{2}}(-2x)(10 + x) + (100 - x^2)^{\frac{1}{2}}(1)$$

$$A' = (100 - x^2)^{-\frac{1}{2}}[-10x - x^2 + 100 - x^2]$$

$$A' = (100 - x^2)^{-\frac{1}{2}}(-2x^2 - 10x + 100)$$

$$A' = -2(100 - x^2)^{-\frac{1}{2}}(x^2 + 5x - 50)$$

$$0 = (x^2 + 5x - 50)$$

$$0 = (x + 10)(x - 5)$$

$$x = 5, \text{ reject the negative root}$$

If the base is $x + x + 10 = 20\text{cm}$ this will maximize the area

Warm Up-Optimizing Volumes and Surface Areas

1. A rectangular open-topped box is to be made from a piece of material 18 cm by 48 cm by cutting a square from each corner and turning up the sides. What size squares must be removed to maximize the capacity of the box?

Let x represent the side of the squares and V be the volume of the box.

$$V = (18-2x)(48-2x)x$$

$$= (18x-2x^2)(48-2x)$$

$$V' = (18-4x)(48-2x) + (18x-2x^2)(-2)$$

$$= 864 - 36x - 192x + 8x^2 - 36x + 4x^2$$

$$= 12x^2 - 264x + 864$$

$$= 12(x^2 - 22x + 72)$$

$$= 12(x-18)(x-4)$$

2nd derivative test:

$$V'' = 24x - 264$$

$$\text{At } x=4, V'' = 24(4) - 264$$

$$= -168$$

$$\therefore V'' < 0 \therefore \text{max}$$

critical #s $\Rightarrow V' = 0$
 $0 = 12(x-18)(x-4)$
 $\therefore x = 18, x = 4$

inadmissible
 $\therefore$ width will be negative

$\therefore$ The dimensions of the squares must be 4 cm by 4 cm.

2. If 3600 cm² of material is available to make a box with a square base and open top, find the largest possible volume of the box.

Let x be the side of the base, h be the height of the box and V be the volume.

$$V = x^2 h \leftarrow 2 \text{ variables, eliminate } h$$

Surface area = area of base + area of 4 sides

$$3600 = x^2 + 4xh$$

$$h = \frac{3600 - x^2}{4x}$$

$$V = x^2 \left(\frac{3600 - x^2}{4x} \right)$$

$$= 900x - \frac{x^3}{4}$$

sub into V

$$V' = 900 - \frac{3}{4}x^2$$

critical #s $\Rightarrow V' = 0$

$$0 = 900 - \frac{3}{4}x^2$$

$$-900 \left(-\frac{4}{3} \right) = x^2$$

$$1200 = x^2$$

$$x = 20\sqrt{3} \text{ or } -20\sqrt{3}$$

inadmissible
 $\therefore$ dimensions cannot be negative

2nd derivative test:

$$V'' = -\frac{3}{2}x$$

$$\text{At } x = 20\sqrt{3} \Rightarrow V'' = -\frac{3}{2}(20\sqrt{3})$$

$$= -30\sqrt{3} \therefore V'' < 0 \therefore \text{max}$$

$$\text{At } x = 20\sqrt{3},$$

$$h = \frac{3600 - (20\sqrt{3})^2}{4(20\sqrt{3})}$$

$$= \frac{30}{\sqrt{3}}$$

$$= 10\sqrt{3}$$

$$\therefore V = (20\sqrt{3})^2 (10\sqrt{3})$$

$$= 12000\sqrt{3}$$

$$\doteq 20784.61$$

$\therefore$ The max volume is approx. 20800 cm³.

3. The volume of a square-based rectangular cardboard box is to be 1000 cm^3 . Find the dimensions so that the quantity of material used to manufacture all 6 faces is a minimum. Assume that there will be no waste material. The machinery available cannot fabricate material smaller in length than 2 cm.

Let x be the side of the base, y be the height, and A be the surface area.

$$A = 2x^2 + 4xy$$

$$V = x^2y = 1000$$

$$y = \frac{1000}{x^2} \rightarrow \text{sub into } A$$

$$A = 2x^2 + 4x \left(\frac{1000}{x^2} \right)$$

$$= 2x^2 + \frac{4000}{x}$$

$$A' = 4x - \frac{4000}{x^2}$$

$$= \frac{4x^3 - 4000}{x^2}$$

critical #s $\rightarrow A' = 0$

$$0 = \frac{4x^3 - 4000}{x^2}$$

$$0 = 4x^3 - 4000$$

$$1000 = x^3$$

$$10 = x$$

2nd derivative test:

$$A'' = 4 + \frac{8000}{x^3}$$

$$\text{At } x=10, A'' = 4 + \frac{8000}{(10)^3}$$

$$= 12$$

$\therefore A'' > 0 \therefore \text{min}$

$$\text{At } x=10, y = \frac{1000}{(10)^2}$$

$$= 10$$

$\therefore$ The dimensions are 10cm by 10cm by 10cm.

Optimization: Revenue and Cost

Revenue Type

1. A railway company offers excursions at \$120 per person for tour groups of up to 100 people. If the size of the group is greater than 100, the company will reduce the price of every ticket by 50 cents for each person in excess of 100. What size tour group would produce the greatest revenue?

Let x be the number of people in excess of 100 and R be the revenue.

$$R = (\text{cost/person})(\# \text{ people})$$

$$R = (120 - 0.50x)(100 + x)$$

$$R' = (-0.50)(100 + x) + (120 - 0.50x)(1)$$

$$= -50 - 0.50x + 120 - 0.50x$$

$$= -x + 70$$

$$\text{critical \#s} \rightarrow R' = 0$$

$$0 = -x + 70$$

$$x = 70$$

$$\begin{aligned} \text{Tour group size} &= 100 + x \\ &= 100 + (70) \\ &= 170 \end{aligned}$$

2nd derivative test:

$$\frac{d^2R}{dx^2} \text{ or } R'' = -1$$

$$\therefore R'' < 0 \therefore \text{max}$$

$\therefore$ A tour group size of 170 people will maximize revenue.

Cost Type

2. An open topped storage box with a square base is to have a capacity of 5 m^3 . Material for the sides costs $\$1.60/\text{m}^2$ while that for the bottom costs $\$2/\text{m}^2$. Find the dimension that will minimize the cost of the material. What is the minimum cost?

$$V = hx^2$$

$$5 = hx^2$$

$$\frac{5}{x^2} = h \quad \text{①}$$

Let x represent the sides of the square base, h represent the height of the box, V be the volume and C be the cost.

$$\text{Note: } SA = 4hx + x^2$$

$$C = 1.6(4hx) + 2(x^2)$$

sub ① into cost equ'n:

$$\begin{aligned} C &= 6.4\left(\frac{5}{x^2}\right)x + 2x^2 \\ &= \frac{32}{x} + 2x^2 \end{aligned}$$

$$C' = \frac{-32}{x^2} + 4x$$

$$\text{critical \#s: } C' = 0$$

$$0 = \frac{-32}{x^2} + 4x$$

$$0 = -32 + 4x^3$$

$$8 = x^3$$

$$2 = x$$

$$\begin{aligned} \therefore h &= \frac{5}{x^2} \\ &= \frac{5}{(2)^2} \\ &= \frac{5}{4} \end{aligned}$$

2nd derivative test:

$$C'' = \frac{64}{x^3} + 4$$

$$\text{At } x=2,$$

$$C'' = \frac{64}{(2)^3} + 4$$

$$= 12 \quad \therefore C'' > 0 \quad \therefore \text{min}$$

$$\text{At } x=2, h = \frac{5}{4}:$$

$$C = \frac{32}{(2)} + 2(2)^2$$

$$= 24$$

$\therefore$ The sides of the base should be 2m and the height should be $\frac{5}{4}$ (or 1.25) m. The minimum cost will then be \$24.

OPTIMIZATION PRACTICE – BUSINESS

1. A car rental agency has 200 cars. The owner finds that at a price of \$36 per day he can rent all the cars. For each \$2 increase in price, the demand is less and 5 fewer cars are rented. What price will maximize the total revenue?
2. The current ticket price at a local theatre is \$4 and the theatre attracts an average of 250 customers per show. Every \$0.20 increase in ticket price reduces the average attendance by 10 customers. Find the ticket price that will maximize the revenue.
3. A variety store can sell 500 yo-yos for \$1 each. For each cent the store lowers the price, it can sell 20 more yo-yos. For what price should it sell the yo-yos to make maximum revenue?
4. A retailer of electrical appliances can sell 200 refrigerators at \$250 each. For each reduction of \$10 in price 10 more refrigerators per month are sold. But reductions of less than \$10 per unit have no effect on sales. What selling price would produce the maximum revenue per month and how many refrigerators would be sold at this price?
5. A real estate firm owns 250 apartments that can be rented out at \$460 per month each. For each \$5 per month increase in rent there are two vacancies created that cannot be filled. What should the monthly rent be to maximize the revenue? What is the maximum revenue?
6. A rectangular building is to be constructed with a curtain wall that will be parallel to the front, and will divide the space into a sales area of 1500 m^2 , and a storage area of 500 m^2 . The outside wall on both sides and across the back will be constructed of concrete block at a cost of \$100 per linear meter. The front wall, which will be comprised primarily of glass, will cost \$345 per linear meter, while the curtained wall will cost \$45 per linear meter. Find the dimension of the building that will give the required floor areas at the lowest cost for all of the walls.

Answers:

- | | |
|----------------------|--|
| 1. \$58 / car | 4. 230 units at \$220 or
220 units at \$230 |
| 2. \$4.50 / ticket | 5. \$542.50/unit for \$117722.50 in revenue |
| 3. \$0.625 / yo – yo | 6. dimensions $28.57m \times 70 m$ |

Revenue Type Problems

1) let x be the number of \$2 increases

$$R = \underset{\text{cost/car}}{(36+2x)} \underset{\text{\# of cars}}{(200-5x)} \quad \underset{\substack{\text{no cost/car} \\ \text{no cars rented}}}{-18 \leq x \leq 40}$$

$$R = 7200 - 180x + 400x - 10x^2 \\ = -10x^2 + 220x + 7200$$

$$\frac{dR}{dx} = -20x + 220$$

Note: When $x = 11$, $R = 8410$.

When $x = -18$, $R = 0$.

" $x = 40$, $R = 0$.

$$0 = -20x + 220$$

$$x = 11$$

$$\therefore \text{Cost/car} = 36 + 2(11) \\ = \$58$$

$\therefore$ the best price is \$58/car

2) let x rep. the number of \$0.2 increases in ticket price

$$R = (4 + 0.2x)(250 - 10x) \quad -20 \leq x \leq 25$$

$$R = 1000 - 40x + 50x - 2x^2$$

$$R = 1000 + 10x - 2x^2$$

$$\frac{dR}{dx} = 10 - 4x$$

Note: When $x = 2.5$, $R = 1012.5$

When $x = -20$, $R = 0$.

" $x = 25$, $R = 0$.

$$0 = 10 - 4x$$

$$x = 2.5$$

$\therefore$ The best ticket price is \$4.50.

$$\therefore \text{Ticket Price} = 4 + 0.2(2.5) \\ = 4.50$$

3) let x rep. the number of 1% increases.

$$R = (1 - 0.01x)(500 + 20x) \quad -40 \leq x \leq 100 \quad \text{Note: when } x = 37.5, R = 781.25$$

$$R = 500 + 20x - 5x - 0.2x^2$$

When $x = -40$ or 100 , $R = 0$

$$R = 500 + 15x - 0.2x^2$$

$$\frac{dR}{dx} = 15 - 0.4x$$

$\therefore$ the best price is \$0.62 / 40%

$$0 = 15 - 0.4x$$

$$x = 37.5$$

$$\therefore \text{Price} = 1 - 0.375 = 0.62$$

- 4) Let x be the number of reductions by 10
the company applies to its cost per fridge

$$R = \overset{\text{Cost}}{(250 - 10x)} \overset{\#}{(200 + 10x)} \quad -20 \leq x \leq 25, x \in \mathbb{I}$$

$$R = 50000 + 2500x - 2000x - 100x^2 \quad \begin{matrix} \uparrow & \uparrow \\ \text{No Fridge} & \text{No Cost/Fridge} \\ \text{Sold} & \end{matrix}$$

$$R = 50000 + 500x - 100x^2$$

$$\frac{dR}{dx} = 500 - 200x$$

$$0 = 500 - 200x$$

$$x = 2.5$$

But x must be an integer
since only whole # of increments
of \$10 are allowed

$$\text{When } x = 2$$

$$R = (250 - 20)(200 + 20) \\ = 50600$$

$$\text{When } x = 3$$

$$R = (250 - 30)(200 + 30) \\ = 50600$$

∴ the company can charge
either \$230 or \$220 / Fridge.
and sell either 220 or 230
fridges.

- 5) Let x rep. the number of \$5 increases

$$R = (460 + 5x)(250 - 2x) \quad -92 \leq x \leq 125$$

$$R = 115000 - 920x + 1250x - 10x^2 \quad \begin{matrix} \uparrow & \uparrow \\ \text{No Rent} & \text{No Appt rented} \end{matrix}$$

$$R = 115000 - 330x - 10x^2$$

$$\frac{dR}{dx} = -330 - 20x$$

$$0 = -330 - 20x$$

$$x = 16.5$$

$$\left. \begin{aligned} \text{Selling price} &= 460 + 5(16.5) = 542.50 \\ \# \text{ of Appts} &= 250 - 2(16.5) = 217 \end{aligned} \right\} R = 542.50 \times 217 = \$117,722.50$$

∴ The best monthly rent is \$542.50
This produces a maximum revenue of
\$117,722.50

6)

$$\text{Total Area} = 1500 + 500 = 2000 \text{ m}^2$$

$$A = xy$$

$$2000 = xy$$

$$y = \frac{2000}{x}$$

$$\text{Cost} = 100(2y + x) + 45x + 345x, \quad x \geq 20$$

$$= 100\left(\frac{4000}{x} + x\right) + 390x$$

$$= \frac{400000}{x} + 490x$$

$$\frac{dC}{dx} = -\frac{400000}{x^2} + 490$$

$$0 = -\frac{400000}{x^2} + 490$$

$$-490x^2 = -400000$$

$$x^2 = 816.33..$$

$$x = \pm 28.57$$

$$\text{but } x > 20 \Rightarrow x = 28.57$$

$$\text{So } y = \frac{2000}{28.57} = 70$$

∴ the best dimensions are 28.57 x 70m

Warm Up-Optimizing Revenue and Costs

1. A real estate firm owns 250 apartments that can be rented out at \$460 per month each. For each \$5 per month increase in rent, there are 2 vacancies created that cannot be filled. What should the monthly rent be to maximize the revenue? What is the maximum revenue?

Let x represent the number of \$5 increases in the rent and R be the total revenue.

$$R = (250 - 2x)(460 + 5x)$$

$$\begin{aligned} R' &= (-2)(460 + 5x) + (250 - 2x)(5) \\ &= -920 - 10x + 1250 - 10x \\ &= -20x + 330 \end{aligned}$$

$$\text{critical \#} \rightarrow R' = 0$$

$$0 = -20x + 330$$

$$x = 16.5$$

2nd derivative test:

$$R'' = -20 \quad \therefore R'' < 0 \quad \therefore \text{max}$$

$$\text{At } x = 16.5,$$

$$\text{rent} = 460 + 5x$$

$$= 460 + 5(16.5)$$

$$= 542.50$$

$$R = [250 - 2(16.5)][460 + 5(16.5)]$$

$$= 117\,722.5$$

$\therefore$ The rent should be \$542.50 to get a maximum revenue of \$117 722.50.

2. A car rental agency has 200 cars. The owner finds that at a price of \$36 per day, he can rent out all the cars. For each \$2 increase in price, 5 fewer cars are rented. What price will maximize the total revenue?

Let x be the number of \$2 increases in the rental price and R be the revenue.

$$R = (36 + 2x)(200 - 5x)$$

$$\begin{aligned} R' &= (2)(200 - 5x) + (36 + 2x)(-5) \\ &= 400 - 10x - 180 - 10x \\ &= -20x + 220 \end{aligned}$$

$$\text{critical \#s} \rightarrow R' = 0$$

$$0 = -20x + 220$$

$$20x = 220$$

$$x = 11$$

2nd derivative test:

$$R'' = -20 \quad \therefore R'' < 0 \quad \therefore \text{max}$$

$$\text{Price} = 36 + 2x$$

$$= 36 + 2(11)$$

$$= 58$$

$\therefore$ A rental price of \$58 will maximize the revenue.

3. A supermarket is designed to have a rectangular floor area of 3750 m^2 with 3 walls made of cement blocks and one wall made of glass. In order to conform to the building code, the length of the glass wall must not exceed 60 m but must not be less than 30 m. The cost per linear meter of constructing a glass wall is twice that of constructing a cement wall. Find the dimensions of the floor area that will minimize the cost of building the walls.

Let x be the length of the glass wall, y be the length of the cement walls adjacent to it, k be the cost of constructing a cement wall and C be the total cost of constructing the building.

Note: $30 \leq x \leq 60$

$$C = 2kx + k(x + 2y)$$

$$xy = 3750$$

$$y = \frac{3750}{x} \rightarrow \text{sub into } C$$

$$\therefore C = 2kx + kx + 2k\left(\frac{3750}{x}\right)$$

$$C = 3kx + \frac{7500k}{x}$$

$$C' = 3k - \frac{7500k}{x^2}$$

$$\text{critical \#s} \rightarrow C' = 0$$

$$0 = 3k - \frac{7500k}{x^2}$$

$$0 = 3kx^2 - 7500k$$

$$0 = 3k(x^2 - 2500)$$

$$x^2 = 2500$$

$$x = 50 \text{ or } -50 \leftarrow \text{inadmissible} \\ \therefore \text{length cannot}$$

$$\therefore y = \frac{3750}{50}$$

$$= 75$$

2nd derivative test:

$$C'' = \frac{7500(2k)}{x^3}$$

$$\text{At } x=50,$$

$$C'' = \frac{15000k}{(50)^3}$$

$$\therefore C'' > 0 \therefore \text{min}$$

$$\text{At } x=50, C = 3k(50) + \frac{7500k}{(50)}$$

$$= 300k \leftarrow \text{absolute min}$$

$$\text{At } x=30, C = 3k(30) + \frac{7500k}{(30)}$$

$$= 340k$$

$$\text{At } x=60, C = 3k(60) + \frac{7500k}{(60)}$$

$$= 305k$$

$\therefore$ The glass wall and the parallel cement wall should be 50m and the other two cement walls should be 75m.

Check end values of domain

4-7 Warm Up

1. Find and classify all the critical points

a) $p(x) = 2x^3 - 4x^2 - 8x + 6$

b) $h(t) = -4.9t^2 + 33.8t + 1.5$

2. Given the function: $g(x) = 1 + 3x^2 - 2x^3$, find all critical numbers, intervals of increase and decrease, and concavity values of the function. Use the information to sketch a graph.

Solutions:

*1 a) $p'(x) = 6x^2 - 8x - 8$
 $= 2(3x+2)(x-2)$

critical #s: $p'(x) = 0$

$0 = 2(3x+2)(x-2)$

$\therefore x = -\frac{2}{3} \text{ or } x = 2$

	$(-\infty, -\frac{2}{3})$	$(-\frac{2}{3}, 2)$	$(2, \infty)$
$3x+2$	-	+	+
$x-2$	-	-	+
$p'(x)$	+	-	+
$p(x)$	↑	↓	↑

$$p(-\frac{2}{3}) = 2(-\frac{2}{3})^3 - 4(-\frac{2}{3})^2 - 8(-\frac{2}{3}) + 6$$

$$= \frac{242}{27}$$

$$p(2) = 2(2)^3 - 4(2)^2 - 8(2) + 6$$

$$= -10$$

$\therefore \text{max at } (-\frac{2}{3}, \frac{242}{27}), \text{ min at } (2, -10)$

b) $h'(t) = -9.8t + 33.8$

critical numbers $\rightarrow h'(t) = 0$

$0 = -9.8t + 33.8$

$t = \frac{33.8}{9.8}$

$t = \frac{169}{49} \text{ or } \approx 3.45$

	$(-\infty, \frac{169}{49})$	$(\frac{169}{49}, \infty)$
$h'(t)$	+	-
$h(t)$	↑	↓

$$h(\frac{169}{49}) = -4.9(\frac{169}{49})^2 + 33.8(\frac{169}{49}) + 1.5$$

$$= \frac{14648}{245} \text{ or } \approx 59.8$$

$\therefore \text{max at } (\frac{169}{49}, \frac{14648}{245})$

$$\#2) g'(x) = 6x - 6x^2 \\ = 6x(1-x)$$

$$g'(x) = 0$$

$$x=0, x=1$$

	$(-\infty, 0)$	$(0, 1)$	$(1, \infty)$
x	$-$	$+$	$+$
$1-x$	$+$	$+$	$-$
$g'(x)$	$-$	$+$	$-$
$g(x)$	$\downarrow$	$\uparrow$	$\downarrow$

$$g(0) = 1 + 3(0)^2 - 2(0)^3 \\ = 1 \rightarrow \text{min at } (0, 1)$$

$$g(1) = 1 + 3(1)^2 - 2(1)^3 \\ = 2 \rightarrow \text{max at } (1, 2)$$

$$g''(x) = 6 - 12x \\ = 6(1-2x)$$

$$g''(x) = 0 \text{ when } x = \frac{1}{2}$$

	$(-\infty, \frac{1}{2})$	$(\frac{1}{2}, \infty)$
$g''(x)$	$+$	$-$
$g(x)$	CU	CD

$$g(\frac{1}{2}) = 1 + 3(\frac{1}{2})^2 - 2(\frac{1}{2})^3 \\ = \frac{3}{2}$$

$$\therefore \text{POI at } (\frac{1}{2}, \frac{3}{2})$$

$$y\text{-int} : 1$$

$$x\text{-int (using GDC)} : \approx 1.68$$

Vertical Asymptotes

Example: Identify the asymptotes in the following graph.

Vertical asymptotes can be found by looking to see where the y -values of a function approaches ∞ or $-\infty$. Horizontal asymptotes can be found by looking to see what happens as x gets bigger and bigger or as x gets smaller and smaller (i.e., as $x \rightarrow \infty$ or as $x \rightarrow -\infty$).

The graphs of rational functions often contain asymptotes. For example, $f(x) = \frac{2(x^2+1)}{(x-1)(x+2)}$ has two vertical asymptotes at $x = 1$ and $x = -2$. Suppose we wanted to graph this function. Consider all the possible 'behaviours' of the function near these two vertical asymptotes.

We can use one-sided limits to decide whether the function is approaching ∞ or $-\infty$ on either side of a vertical asymptote.

Ex: Sketch a graph of $f(x) = \frac{2(x^2+1)}{(x-1)(x+2)}$ near its vertical asymptotes. VAs: $x=1$ and $x=-2$

Near $x=1$:

$$\lim_{x \rightarrow 1^-} \frac{2(x^2+1)}{(x-1)(x+2)} = \frac{+}{(0^-)(+)} = -\infty$$

$$\lim_{x \rightarrow 1^+} \frac{2(x^2+1)}{(x-1)(x+2)} = \frac{+}{(0^+)(+)} = +\infty$$

Near $x=-2$:

$$\lim_{x \rightarrow -2^-} \frac{2(x^2+1)}{(x-1)(x+2)} = \frac{+}{(-)(0^-)} = +\infty$$

$$\lim_{x \rightarrow -2^+} \frac{2(x^2+1)}{(x-1)(x+2)} = \frac{+}{(-)(0^+)} = -\infty$$

Summary for Vertical Asymptotes

To determine the behavior of a rational function near its vertical asymptotes:

- 1) **Factor and reduce the expression**, if possible. (Note: There may be a hole if the factor as a variable.)
- 2) **Locate vertical asymptotes** by finding values of x that make the denominator of the simplified function zero.
- 3) If $x = a$ is a vertical asymptote, calculate $\lim_{x \rightarrow a^-} f(x)$ and $\lim_{x \rightarrow a^+} f(x)$. If this limit will either be ∞ or $-\infty$. To decide which, consider the sign of each of the factors of $f(x)$.

Example: sketch each of the following around the vertical asymptotes.

a) $f(x) = \frac{3-2x}{x-3}$

$$\lim_{x \rightarrow 3^-} f(x) = \frac{-}{0^-} = +\infty$$

$$\lim_{x \rightarrow 3^+} f(x) = \frac{-}{0^+} = -\infty$$

b) $f(x) = \frac{x}{x^2-x-6} = \frac{x}{(x-3)(x+2)}$

$$\lim_{x \rightarrow 3^-} f(x) = \frac{+}{(0^-)(+)} = -\infty$$

$$\lim_{x \rightarrow 3^+} f(x) = \frac{+}{(0^+)(+)} = +\infty$$

$$\lim_{x \rightarrow -2^-} f(x) = \frac{-}{(-)(0^-)} = -\infty$$

$$\lim_{x \rightarrow -2^+} f(x) = \frac{-}{(-)(0^+)} = +\infty$$

c) $f(x) = \frac{x-3}{x^2+x-12} = \frac{x-3}{(x+4)(x-3)} = \frac{1}{x+4}, x \neq -4$

$$\lim_{x \rightarrow -4^-} f(x) = \frac{-}{(0^-)(-)} = -\infty$$

$$\lim_{x \rightarrow -4^+} f(x) = \frac{-}{(0^+)(-)} = +\infty$$

4-8 Warm Up

- Find the absolute maximum and minimum values of $f(x) = 2x^3 - 3x^2 - 36x + 62$ on the interval $x \in [-3, 4]$.
- Sketch a graph that satisfies the following conditions:
 - $f''(x) < 0, x \in (-2, 1)$
 - $f''(x) > 0, x \in (-\infty, -2) \cup (1, \infty)$
 - $f(-2) = -3$
 - $f(0) = 0$
 - $f'(-3) = 0$
 - $f'(2) = 0$
- Sketch the graph of $f(x) = x^{\frac{2}{3}}(x - 5)$
- Find the equation of the cubic function which has a point of inflection at $(0, 2)$ and a local maximum at $(2, 6)$.

Solutions

#1) $f'(x) = 6x^2 - 6x - 36$
 $= 6(x-3)(x+2)$

critical #s:
 $x = 3, -2$

$$f(3) = 2(3)^3 - 3(3)^2 - 36(3) + 62$$

$$= -19$$

$$f(-2) = 2(-2)^3 - 3(-2)^2 - 36(-2) + 62$$

$$= 106$$

$$f(-3) = 2(-3)^3 - 3(-3)^2 - 36(-3) + 62$$

$$= 89$$

$$f(4) = 2(4)^3 - 3(4)^2 - 36(4) + 62$$

$$= -2$$

$\therefore$ absolute min at $(3, -19)$ and absolute max at $(-2, 106)$

• CD $-2 < x < 1$; CU $x < -2, x > 1$

• POI at $(-2, -3)$, $x = 1$

• min at $x = 2, -3$

$$\begin{aligned}
 \#3) f'(x) &= \frac{2}{3}x^{-\frac{1}{3}}(x-5) + x^{\frac{2}{3}} \\
 &= x^{-\frac{1}{3}} \left[\frac{2}{3}(x-5) + x \right] \\
 &= \frac{\frac{5}{3}x - \frac{10}{3}}{x^{\frac{1}{3}}} \\
 &= \frac{5x-10}{3x^{\frac{1}{3}}} \\
 &= \frac{5(x-2)}{3x^{\frac{1}{3}}}
 \end{aligned}$$

Critical #s:

$$f'(x) = 0 \Rightarrow x = 2$$

$$f'(x) \text{ DNE} \Rightarrow x = 0$$

	$(-\infty, 0)$	$(0, 2)$	$(2, \infty)$

 \end{aligned}$$

$$x\text{-int: } 0, 5$$

$$y\text{-int: } 0$$

$$\begin{aligned}
 f''(x) &= \frac{5(3x^{\frac{1}{3}}) - (5x-10)(x^{-\frac{2}{3}})}{(3x^{\frac{1}{3}})^2} \\
 &= \frac{5x^{-\frac{2}{3}} [3x - (x-2)]}{9x^{\frac{2}{3}}} \\
 &= \frac{5(2x+2)}{9x^{\frac{4}{3}}} \\
 &= \frac{10(x+1)}{9x^{\frac{4}{3}}}
 \end{aligned}$$

possible POIs:

$$f''(x) = 0$$

$$\therefore x = -1$$

$$f''(x) \text{ DNE}$$

$$\therefore x = 0$$

	$(-\infty, -1)$	$(-1, 0)$	$(0, \infty)$
$x+1$	-	+	+
$x^{\frac{4}{3}}$	+	+	+
$f''(x)$	-	+	+
$f(x)$	CD	CU	CU

$$\begin{aligned}
 f(-1) &= (-1)^{\frac{2}{3}} [(-1) - 5] \\
 &= -6
 \end{aligned}$$

$$\#4) f(x) = ax^3 + bx^2 + cx + d$$

$$f'(x) = 3ax^2 + 2bx + c$$

$$f''(x) = 6ax + 2b$$

$$f(0) = 2 \Rightarrow \therefore d = 2$$

$$f''(0) = 0 \Rightarrow 0 = 6a(0) + 2b \\ 0 = b$$

$$\therefore f(2) = 6, d = 2, b = 0$$

$$\therefore 6 = a(2)^3 + c(2) + 2$$

$$4 = 8a + 2c \rightarrow \textcircled{1}$$

$$\therefore f'(2) = 0, b = 0$$

$$\therefore 0 = 3a(2)^2 + c$$

$$0 = 12a + c \rightarrow \textcircled{2}$$

$$\textcircled{1} - 2 \times \textcircled{2} : 4 = -16a \\ -\frac{1}{4} = a$$

$$\text{sub } a = -\frac{1}{4} \text{ into } \textcircled{2} :$$

$$0 = 12\left(-\frac{1}{4}\right) + c$$

$$3 = c$$

$\therefore$ The cubic function is

$$f(x) = -\frac{1}{4}x^3 + 3x + 2$$

Horizontal Asymptotes

Recall from the previous lesson that horizontal asymptotes can be found by looking to see what happens as x gets bigger and bigger or as x gets smaller and smaller (i.e., as $x \rightarrow \infty$ or as $x \rightarrow -\infty$).

We can use this idea to find the horizontal asymptotes for the function $f(x) = \frac{2(x^2+1)}{(x-1)(x+2)}$.

First, determine $\lim_{x \rightarrow \infty} \frac{2(x^2+1)}{(x-1)(x+2)}$ and $\lim_{x \rightarrow -\infty} \frac{2(x^2+1)}{(x-1)(x+2)}$.

$$\begin{aligned} \lim_{x \rightarrow \infty} \frac{2(x^2+1)}{(x-1)(x+2)} \\ &= \lim_{x \rightarrow \infty} \frac{2x^2+2}{x^2+x-2} \\ &= \lim_{x \rightarrow \infty} \frac{2 + \frac{2}{x^2}}{1 + \frac{1}{x} - \frac{2}{x^2}} \\ &= 2 \end{aligned}$$

$$\begin{aligned} \lim_{x \rightarrow -\infty} \frac{2(x^2+1)}{(x-1)(x+2)} \\ \lim_{x \rightarrow -\infty} \frac{2 + \frac{2}{x^2}}{1 + \frac{1}{x} - \frac{2}{x^2}} \\ = 2 \end{aligned}$$

Divide each term by the term with the highest degree from the denominator.

$\therefore$ There is an H.A. at $y=2$.

Draw diagrams to show the different ways in which our function may be approaching this asymptote.

How can we decide which scenario is the correct one? There are two methods.

1) Determine the sign for $\lim_{x \rightarrow \infty} f(x) - L$ and $\lim_{x \rightarrow -\infty} f(x) - L$, where $y = L$ is the horizontal asymptote.

- If the limit is **positive**, then $f(x)$ is **above** the horizontal asymptote.
- If the limit is **negative**, then $f(x)$ is **below** the horizontal asymptote.

OR

2) Calculate $f(1000)$ and $f(-1000)$ to test the behavior of the function at the extremities of the graph.

- If $f(1000) > L$ or $f(-1000) > L$, the function is approaching the horizontal asymptote from above.
- If $f(1000) < L$ or $f(-1000) < L$, the function is approaching the asymptote from below.

Example: Determine the end behavior of the function $f(x) = \frac{2(x^2+1)}{(x-1)(x+2)}$ and sketch a possible graph using the information gathered over the last two lessons.

Recall: VAs at $x=-2$ and $x=1$

$$f(1000) = \frac{2[(1000)^2+1]}{[(1000)-1][(1000)+2]} \\ = 1998007988$$

$$f(1000) < 2$$

$f(x)$ is below the HA
as $x \rightarrow \infty$

$$f(-1000) = \frac{2[(-1000)^2+1]}{[(-1000)-1][(-1000)+2]} \\ = 2002008012$$

$$f(-1000) > 2$$

$f(x)$ is above the HA
as $x \rightarrow -\infty$

Summary for Horizontal Asymptotes

To determine the behavior of a rational function near its horizontal asymptotes:

- 1) Locate horizontal asymptotes by calculate $\lim_{x \rightarrow \infty} f(x)$ and $\lim_{x \rightarrow -\infty} f(x)$. If $\lim_{x \rightarrow \infty} f(x) = L$ or $\lim_{x \rightarrow -\infty} f(x) = L$, then $y = L$ is the equation of the horizontal asymptote.
- 2) Calculate $f(1000)$ and $f(-1000)$. If $f(1000) > L$ or $f(-1000) > L$, the function is approaching the horizontal asymptote from above. If $f(1000) < L$ or $f(-1000) < L$, the function is approaching the asymptote from below.

Example: Sketch a possible graph of the function, $f(x) = \frac{3-2x}{x-3}$, by analyzing its behavior near its asymptotes.

Horizontal Asymptotes

$$\lim_{x \rightarrow \infty} \frac{3-2x}{x-3} = \lim_{x \rightarrow \infty} \frac{\frac{3}{x} - 2}{1 - \frac{3}{x}} = -2$$

$\therefore$ HA is $y = -2$

Above or below HA?

$$f(1000) = \frac{3-2(1000)}{(1000)-3} = -2.003 \rightarrow \text{below HA as } x \rightarrow \infty$$

$$f(-1000) = \frac{3-2(-1000)}{(-1000)-3} = -1.997 \rightarrow \text{above HA as } x \rightarrow -\infty$$

Vertical Asymptotes

VA at $x = 3$

$$\lim_{x \rightarrow 3^-} \frac{3-2x}{x-3} = \frac{-3}{0^-} = +\infty$$

$$\lim_{x \rightarrow 3^+} \frac{3-2x}{x-3} = \frac{-3}{0^+} = -\infty$$

Curve Sketching Summary

- 1) Increasing: a function is increasing where $f'(x)$ > 0
Decreasing: a function is decreasing where $f'(x)$ < 0

2) First Derivative Test

- If $f'(x)$ changes sign from positive to negative at c , then $f(x)$ has a local maximum at c .
- If $f'(x)$ changes sign from negative to positive at c , then $f(x)$ has a local minimum at c .

Draw sketches to illustrate the First Derivative Test:

- 3) Critical Number: c is a critical number if c is in the domain of the function and either
i. $f'(c) = \underline{0}$ OR ii. $f'(c) = \underline{DNE}$

If $f'(c) = 0$, what might be happening at c ?

Local maximum point,
local minimum point or
a point of inflection
at $x=c$.

If $f'(c)$ does not exist, what might be happening at c ?

Vertical asymptote, cusp
or POI at $x=c$.

4) Vertical Asymptotes

- simplify the rational expression first, then look at denominator.
- If $x = a$ is a vertical asymptote, calculate $\lim_{x \rightarrow a^-} f(x)$ and $\lim_{x \rightarrow a^+} f(x)$. This limit will either be ∞ or $-\infty$. To decide which, consider the sign of each of the factors of $f(x)$.

5) Horizontal Asymptotes

- Determine if $\lim_{x \rightarrow -\infty} f(x)$ or $\lim_{x \rightarrow \infty} f(x)$ exists.
- Once a horizontal asymptote has been found, you must determine whether the function is approaching the asymptote from above or below. Determine $f(1000)$ and $f(-1000)$

6) Points of Inflection and Concavity

Test for Concavity:

- If $f''(x) > 0$ for all x on some interval I , then the graph of f is concave up on I .
- If $f''(x) < 0$ for all x on some interval I , then the graph of f is concave down on I .

To Find Possible P. O. I:

- Solve $f''(x) = 0$ and determine where $f''(x)$ DNE.
- Use an interval chart to determine on which intervals $f''(x)$ is positive or negative.

A point of inflection occurs when..

the graph changes from concave up to concave down or vice versa.

(Note: if $f(c)$ is defined, $f'(c)$ DNE, $f''(c)$ DNE and there is no change in concavity, there is a cusp at $x=c$)

7) Second Derivative Test:

- If $f'(c) = 0$ and $f''(c) > 0$, then f has a local minimum at $x = c$.
- If $f'(c) = 0$ and $f''(c) < 0$, then f has a local maximum at $x = c$.

Draw diagrams to illustrate the Second Derivative Test

$f''(x) > 0$
 $\therefore$ LOCAL MIN

$f''(x) < 0$
 LOCAL MAX

A Finalized Algorithm for Curve Sketching

An Algorithm for Curve Sketching

- 1) Determine the domain of the function. Any value for which the function is undefined creates a discontinuity in the function (either a hole or an asymptote).
- 2) Determine the **y-intercept**, and, if easy to do, any **x-intercept(s)**.
- 3) Determine the behavior of the function near any **vertical asymptotes**.
- 4) Determine the behavior of the function near any **horizontal asymptotes**.
- 5) Determine the **critical points** by solving $f'(x) = 0$ and by determining where $f'(x)$ does not exist.
- 6) **Test any critical points** by using the First Derivative Test or by using the Second Derivative Test.
- 7) Determine the **possible Points of Inflection** by solving $f''(x) = 0$ and by determining where the $f''(x)$ does not exist. **Test the concavity on either side of a possible P. O. I.**
- 8) Combine information from above to produce a sketch of the function.

The steps outlined above are not always necessary or always sufficient to sketch: your intuition and experience with functions can help you out a lot.

EXAMPLE: Use the Algorithm for Curve Sketching to graph the following:

a) $f(x) = \frac{3x^3 - 2}{x^3 + 1}$

b) $f(x) = \frac{x}{(x-1)^2}$

a)

1) $D: \{x | x \neq -1, x \in \mathbb{R}\}$

2) y-int: -2

x-int: $3x^3 - 2 = 0$

$$x^3 = \frac{2}{3}$$

$$x = \left(\frac{2}{3}\right)^{\frac{1}{3}}$$

$$x \approx 0.874$$

3) VA at $x = -1$

$$\lim_{x \rightarrow -1^-} \frac{3x^3 - 2}{x^3 + 1}$$

$$= \frac{-5}{0^-}$$

$$= +\infty$$

$$\lim_{x \rightarrow -1^+} \frac{3x^3 - 2}{x^3 + 1}$$

$$= \frac{-5}{0^+}$$

$$= -\infty$$

4) HA:

$$\lim_{x \rightarrow -\infty} \frac{3 - \frac{2}{x^3}}{1 - \frac{1}{x^3}}$$

$$= 3$$

$$\therefore \text{HA is at } y = 3$$

Above or below HA?

$$f(1000) = \frac{3(1000)^3 - 2}{(1000)^3 + 1}$$

$$= 2.999999995 \rightarrow \text{below HA as } x \rightarrow \infty$$

$$f(-1000) = \frac{3(-1000)^3 - 2}{(-1000)^3 + 1}$$

$$= 3.000000005 \rightarrow \text{above HA as } x \rightarrow -\infty$$

5) Critical Points:

$$f'(x) = \frac{9x^2(x^3+1) - 3x^2(3x^3-2)}{(x^3+1)^2}$$

$$= \frac{9x^5 + 9x^2 - 9x^5 + 6x^2}{(x^3+1)^2}$$

$$= \frac{15x^2}{(x^3+1)^2}$$

$$f'(x) = 0$$

$$15x^2 = 0$$

$$x = 0$$

$$f'(x) \text{ DNE}$$

$$(x^3+1)^2 = 0$$

$$x^3 = -1$$

$$x = -1 \leftarrow \text{VA}$$

6) First Derivative Test

$\therefore$ no min/max

7) Possible P.O.I.s:

$$f''(x) = \frac{30x(x^3+1)^2 - 2(x^3+1)(3x^2)(15x^2)}{(x^3+1)^4}$$

$$= \frac{30x(x^3+1)[(x^3+1) - 3x^3]}{(x^3+1)^4}$$

$$= \frac{30x(-2x^3+1)}{(x^3+1)^3}$$

Possible POIs:

$$f''(x) = 0$$

$$30x(-2x^3+1) = 0$$

$$\therefore x = 0 \text{ or } -2x^3 + 1 = 0$$

$$x^3 = \frac{1}{2}$$

$$x = \sqrt[3]{\frac{1}{2}}$$

$$(x \approx 0.794)$$

$$f''(x) \text{ DNE}$$

$$(x^3+1)^3 = 0$$

$$x^3 = -1$$

$$x = -1$$

$$f(0) = \frac{3(0)^3 - 2}{(0)^3 + 1}$$

$$= -2$$

$$f(\sqrt[3]{\frac{1}{2}}) = \frac{3(\sqrt[3]{\frac{1}{2}})^3 - 2}{(\sqrt[3]{\frac{1}{2}})^3 + 1}$$

$$= -0.332$$

VA at $x = -1$

$$b) f(x) = \frac{x}{(x-1)^2}$$

$$\text{Domain: } D = \{x \mid x \neq 1, x \in \mathbb{R}\}$$

$$y\text{-int: } 0$$

$$x\text{-int: } 0$$

$$\text{VAS: } x=1$$

$$\begin{aligned} \lim_{x \rightarrow 1^-} \frac{x}{(x-1)^2} &= \frac{1}{0^+} = +\infty \\ \lim_{x \rightarrow 1^+} \frac{x}{(x-1)^2} &= \frac{1}{0^+} = +\infty \end{aligned}$$

HA:

$$\begin{aligned} \lim_{x \rightarrow -\infty} \frac{x}{x^2 - 2x + 1} &= \lim_{x \rightarrow -\infty} \frac{\frac{1}{x}}{1 - \frac{2}{x} + \frac{1}{x^2}} = 0 \\ \lim_{x \rightarrow \infty} \frac{\frac{1}{x}}{1 - \frac{2}{x} + \frac{1}{x^2}} &= 0 \end{aligned}$$

$\therefore$ HA is $y=0$

Above or below HA?

$$\begin{aligned} f(1000) &= \frac{1000}{[1000-1]^2} \approx 1.002 \times 10^{-3} \quad \therefore \text{above HA as } x \rightarrow \infty \\ f(-1000) &= \frac{(-1000)}{[-1000-1]^2} \approx -9.98 \times 10^{-4} \quad \therefore \text{below HA as } x \rightarrow -\infty \end{aligned}$$

First Derivative Test

$$\begin{aligned} f'(x) &= \frac{(x-1)^2 - 2(x-1)(x)}{(x-1)^4} \\ &= \frac{(x-1)[(x-1) - 2x]}{(x-1)^4} \\ &= \frac{-x-1}{(x-1)^3} \\ &= \frac{-(x+1)}{(x-1)^3} \end{aligned}$$

$$\begin{aligned} f'(x) &= 0 & f'(x) \text{ DNE} \\ -(x+1) &= 0 & (x-1)^3 = 0 \\ x &= -1 & x = 1 \end{aligned}$$

$$\begin{aligned} f(-1) &= \frac{(-1)}{[-1-1]^2} \\ &= -\frac{1}{4} \end{aligned}$$

$$\therefore \text{min at } (-1, -\frac{1}{4})$$

no max at $x=1$
 $\therefore$ VA at $x=1$

Second Derivative Test

$$\begin{aligned}
 f''(x) &= \frac{-1(x-1)^3 - 3(x-1)^2(-x-1)}{(x-1)^6} \\
 &= \frac{-(x-1)^2[(x-1) + 3(-x-1)]}{(x-1)^6} \\
 &= \frac{-(x-1-3x-3)}{(x-1)^4} \\
 &= \frac{-(-2x-4)}{(x-1)^4} \\
 &= \frac{2(x+2)}{(x-1)^4}
 \end{aligned}$$

Possible POIs:

$$\begin{aligned}
 f''(x) &= 0 \\
 x+2 &= 0 \\
 x &= -2
 \end{aligned}$$

$$\begin{aligned}
 f''(x) &\text{DNE} \\
 (x-1)^4 &= 0 \\
 x &= 1
 \end{aligned}$$

$$\begin{aligned}
 \text{POI: } f(-2) &= \frac{(-2)}{[-2-1]^2} \\
 &= -\frac{2}{9} \rightarrow (-2, -\frac{2}{9})
 \end{aligned}$$

Curve Sketching Putting It All Together

1. Determine the intervals of increase and decrease for the function $f(x) = \frac{1}{4}x^4 - 2x^3$.

$$f'(x) = x^3 - 6x^2$$

critical #s $\rightarrow f'(x) = 0$

$$x^2(x-6) = 0$$

$$x = 0, x = 6$$

	$(-\infty, 0)$	$(0, 6)$	$(6, \infty)$
x^2	+	+	+
$x-6$	-	-	+
$f'(x)$	-	-	+
$f(x)$	↓	↓	↑

$\therefore$ The function is increasing on $x \in (6, \infty)$
and decreasing on $x \in (-\infty, 0) \cup (0, 6)$.

2. Determine the relative extrema of the function $f(x) = x^3 - 3x + 2$.

$$f'(x) = 3x^2 - 3$$

critical #s $\rightarrow f'(x) = 0$

$$0 = 3(x^2 - 1)$$

$$0 = 3(x-1)(x+1)$$

$$x = 1, -1$$

	$(-\infty, -1)$	$(-1, 1)$	$(1, \infty)$
$x-1$	-	-	+
$x+1$	-	+	+
$f'(x)$	+	-	+
$f(x)$	↑	↓	↑

At $x = -1$,

$$f(-1) = (-1)^3 - 3(-1) + 2$$

$$= 4$$

At $x = 1$,

$$f(1) = (1)^3 - 3(1) + 2$$

$$= 0$$

$\therefore$ Local maximum is at $(-1, 4)$ and local minimum is at $(1, 0)$.

3. Sketch a graph of the function, $f(x) = \frac{x^2-x-2}{x-1}$, by determining:

- The domain
- x -intercept(s) and y -intercept
- Critical points
- Vertical and Horizontal Asymptote(s)
- Point(s) of inflection

a) domain $\{x \mid x \neq 1, x \in \mathbb{R}\}$

$$b) y' = \frac{(2x-1)(x-1) - (x^2-x-2)}{(x-1)^2}$$

$$= \frac{2x^2 - 2x - x + 1 - x^2 + x + 2}{(x-1)^2}$$

$$= \frac{x^2 - 2x + 3}{(x-1)^2}$$

critical #s $\rightarrow y' = 0$

$$x^2 - 2x + 3 = 0$$

$$x = \frac{-(-2) \pm \sqrt{(-2)^2 - 4(1)(3)}}{2(1)}$$

$$= \frac{2 \pm \sqrt{-8}}{2}$$

$\therefore$ No solution

$f'(x)$ DNE:

$$(x-1)^2 = 0$$

$x = 1 \leftarrow$ Not in domain

c)

	$(-\infty, 1)$	$(1, \infty)$
$(x-1)^2$	+	+
$x^2 - 2x + 3$	+	+
$f'(x)$	+	+
$f(x)$	$\uparrow$	$\uparrow$

$\therefore$ Intervals of increase:

$$x \in (-\infty, 1) \cup (1, \infty), x \in \mathbb{R}$$

Interval of decrease: none

d) VA : $x = 1$

$$\lim_{x \rightarrow 1^-} \frac{(x-2)(x+1)}{x-1}$$

$$= \frac{(-)(+)}{(vs-)} = +\infty$$

$$\lim_{x \rightarrow 1^+} \frac{(x-2)(x+1)}{x-1}$$

$$= \frac{(-)(+)}{(vs+)} = -\infty$$

HA :

$$\lim_{x \rightarrow -\infty} \frac{x^2 - x - 2}{x - 1}$$

$$= \lim_{x \rightarrow -\infty} \frac{1 - \frac{1}{x} - \frac{1}{x^2}}{\frac{1}{x} - \frac{1}{x^2}}$$

$$= -\infty$$

$$\lim_{x \rightarrow \infty} \frac{1 - \frac{1}{x} - \frac{1}{x^2}}{\frac{1}{x} - \frac{1}{x^2}}$$

$$= +\infty$$

OA: $-1 \mid \begin{array}{ccc} 1 & -1 & -2 \\ \downarrow & -1 & 0 \\ 1 & 0 & -2 \end{array}$

$$\therefore y = x - \frac{2}{x-1}$$

$$\therefore \text{OA: } y = x$$

e) x -int:

$$x^2 - x - 2 = 0$$

$$(x-2)(x+1) = 0$$

$$x = -1, 2$$

y -int:

$$y = \frac{(0)^2 - (0) - 2}{(0) - 1}$$

$$= 2$$

4. Sketch the graph of $f(x) = x^{\frac{2}{3}} - 2x^{\frac{5}{3}}$ by completing a full analysis. Use the following to help you:

$$f'(x) = \frac{2}{3} \left(\frac{1-5x}{x^{\frac{1}{3}}} \right) \text{ and } f''(x) = -\frac{2}{9} \left(\frac{1+10x}{x^{\frac{4}{3}}} \right).$$

x-int:

$$0 = x^{\frac{2}{3}} - 2x^{\frac{5}{3}}$$

$$0 = x^{\frac{2}{3}}(1-2x)$$

$$\therefore x=0 \text{ or } x=\frac{1}{2}$$

y-int:

$$f(0) = 0$$

Asymptotes:

no VAs

no HA

End behaviours:

$$\lim_{x \rightarrow \infty} f(x)$$

$$= -\infty$$

$$\lim_{x \rightarrow -\infty} f(x)$$

$$= +\infty$$

First Derivative:

critical #s,

$$f'(x) = 0:$$

$$1-5x=0$$

$$x = \frac{1}{5}$$

$$f'(x) \text{ DNE:}$$

$$x^{\frac{1}{3}} = 0$$

$$x = 0$$

$$f\left(\frac{1}{5}\right) = \left(\frac{1}{5}\right)^{\frac{2}{3}} - 2\left(\frac{1}{5}\right)^{\frac{5}{3}}$$

$$\doteq 0.205 \leftarrow \text{max}$$

$$f(0) = 0 \leftarrow \text{min}$$

$$x^{\frac{4}{3}} = 0$$

$$x = 0$$

$$f\left(-\frac{1}{10}\right) = \left(-\frac{1}{10}\right)^{\frac{2}{3}} - 2\left(-\frac{1}{10}\right)^{\frac{5}{3}}$$

$$\doteq 0.259 \leftarrow \text{POI}$$

$$f(0) = 0 \leftarrow \text{cusp}$$

Review: Maximum and Minimum Problems

1. If the sum of two positive numbers is 28, prove that the square of one added to the cube of the other is at least 640.

Let the 2 numbers be x and y and S be the sum.

$$\begin{aligned} x+y &= 28 \\ y &= 28-x \quad \textcircled{1} \end{aligned}$$

$$S = x^2 + y^3 \quad \textcircled{2}$$

sub ① into ②:

$$S = x^2 + (28-x)^3$$

$$S' = 2x - 3(28-x)^2$$

critical values $\rightarrow S' = 0$:

$$0 = 2x - 3(784 - 56x + x^2)$$

$$0 = 2x - 2352 + 168x - 3x^2$$

$$3x^2 - 170x + 2352 = 0$$

$$x = \frac{-(-170) \pm \sqrt{(-170)^2 - 4(3)(2352)}}{2(3)}$$

$$= \frac{170 \pm 26}{6}$$

$$\therefore x = 24 \text{ or } x = 32.7 \quad \leftarrow \text{inadmissible} \quad \therefore x > S.$$

$$S'' = 2 + 6(28-x)$$

$$\text{At } x=24, S'' = 2 + 6[28-(24)]$$

$$= 26 \quad \therefore S'' > 0 \quad \therefore \text{min}$$

$$\therefore y = 28 - (24) = 4$$

$$S = (24)^2 + (4)^3 = 640$$

$\therefore$ The minimum sum is 640

$\therefore$ The statement is true

2. What is the maximum possible area of a rectangle with a base that lies on the x-axis and two upper vertices that lie on the graph of $y = 4 - x^2$.

Let $2x$ be the length, y be the width and A be the area of the rectangle.

$$\therefore y = 4 - x^2 \text{ and } A = lw$$

$$\therefore A = 2x(4 - x^2)$$

$$A = 8x - 2x^3$$

$$A' = 8 - 6x^2$$

critical #s $\rightarrow A' = 0$

$$0 = 8 - 6x^2$$

$$x^2 = \frac{4}{3}$$

$$x = \frac{2}{\sqrt{3}} \text{ or } \frac{-2}{\sqrt{3}} \quad \leftarrow \text{inadmissible} \quad \therefore \text{length} > 0$$

2nd derivative test:

$$A'' = -12x$$

$$\text{At } x = \frac{2}{\sqrt{3}}, A'' = -12\left(\frac{2}{\sqrt{3}}\right)$$

$$= -8\sqrt{3}$$

$$\therefore A'' < 0 \quad \therefore \text{max}$$

$$\text{At } x = \frac{2}{\sqrt{3}}, y = 4 - \left(\frac{2}{\sqrt{3}}\right)^2 = \frac{8}{3}$$

$$\therefore A = 2\left(\frac{2}{\sqrt{3}}\right)\left(\frac{8}{3}\right)$$

$$= \frac{32}{3\sqrt{3}}$$

$$= \frac{32\sqrt{3}}{9}$$

$\therefore$ The max area of the rectangle is $\frac{32\sqrt{3}}{9}$ units².

3. Find the point on the hyperbola $\frac{x^2}{1} - \frac{y^2}{4} = 1$ that is nearest to the point (6, 0).

Let (x, y) be the point on the hyperbola and d be the distance.

$$\frac{x^2}{1} - \frac{y^2}{4} = 1 \rightarrow 4x^2 - 4 = y^2$$

$$\begin{aligned} d^2 &= (x-6)^2 + (y-0)^2 \\ d^2 &= x^2 - 12x + 36 + y^2 \\ d^2 &= x^2 - 12x + 36 + 4x^2 - 4 \\ d^2 &= 5x^2 - 12x + 32 \end{aligned}$$

$$\begin{aligned} (d^2)' &= 10x - 12 \\ \text{critical \#s} &\rightarrow (d^2)' = 0 \\ 0 &= 10x - 12 \\ x &= \frac{6}{5} \end{aligned}$$

2nd derivative test:

$$(d^2)'' = 10 \quad \therefore (d^2)'' > 0 \quad \therefore \text{min}$$

$$\begin{aligned} \text{At } x = \frac{6}{5}, y^2 &= 4\left(\frac{6}{5}\right)^2 - 4 \\ y^2 &= \frac{44}{25} \\ y &= \pm \frac{2\sqrt{11}}{5} \end{aligned}$$

$\therefore$ The nearest points are $\left(\frac{6}{5}, \frac{2\sqrt{11}}{5}\right)$ and $\left(\frac{6}{5}, -\frac{2\sqrt{11}}{5}\right)$.

4. A cylindrical tin can, closed at both ends, of a given capacity, has to be constructed. Show that the amount of tin required will be a minimum when the height is equal to the diameter.

Let S be the surface area, V be the volume, r be the radius and h be the height.

$$V = \pi r^2 h \rightarrow h = \frac{V}{\pi r^2}, \text{ where } V \text{ is a constant}$$

2nd derivative test:

$$S'' = 4\pi + \frac{4V}{r^3}$$

$$\text{At } r = \left(\frac{V}{2\pi}\right)^{\frac{1}{3}},$$

$$S'' = 4\pi + \frac{4V}{\left(\frac{V}{2\pi}\right)^{\frac{1}{3}}} > 0 \quad \therefore \text{min}$$

$$\begin{aligned} \therefore h &= \frac{V}{\pi \left[\left(\frac{V}{2\pi}\right)^{\frac{1}{3}}\right]^2} & \therefore 2r &= 2\left(\frac{V}{2\pi}\right)^{\frac{1}{3}} \\ &= \left(\frac{V}{\pi}\right)^{\frac{1}{3}} (2)^{\frac{2}{3}} & &= \left(\frac{V}{\pi}\right)^{\frac{1}{3}} \frac{2}{2^{\frac{1}{3}}} \\ & & &= \left(\frac{V}{\pi}\right)^{\frac{1}{3}} (2)^{\frac{2}{3}} \end{aligned}$$

$\therefore h = 2r$ will result in the minimum amount of tin required.

$$\begin{aligned} S &= 2\pi r^2 + 2\pi r h \\ S &= 2\pi r^2 + 2\pi r \left(\frac{V}{\pi r^2}\right) \\ S &= 2\pi r^2 + \frac{2V}{r} \\ S' &= 4\pi r - \frac{2V}{r^2} \\ \text{critical \#s} &\rightarrow S' = 0 \\ 0 &= 4\pi r - \frac{2V}{r^2} \\ 0 &= 4\pi r^3 - 2V \\ 2V &= 4\pi r^3 \\ \frac{2V}{4\pi} &= r^3 \\ \therefore r &= \left(\frac{V}{2\pi}\right)^{\frac{1}{3}} \end{aligned}$$

II. Curve Sketching from Given Information

1. Sketch a graph of a function that satisfies all of the following conditions:

- The domain of the function is the set of all real numbers except $x=1$ and $x=-1$.
- $\lim_{x \rightarrow 1^-} f(x) = -\infty$, $\lim_{x \rightarrow 1^+} f(x) = \infty$, $\lim_{x \rightarrow -1^-} f(x) = \infty$, $\lim_{x \rightarrow -1^+} f(x) = -\infty$
- $\lim_{x \rightarrow \infty} f(x) = 0$, $f(x) < 0$ as $x \rightarrow \infty$ below $x=0$ axis
- $\lim_{x \rightarrow -\infty} f(x) = 0$, $f(x) < 0$ as $x \rightarrow -\infty$ below $x=0$ axis
- The y intercept is 2. There are no x intercepts.

2. Sketch a graph of a polynomial (continuous) function that satisfies all of the following conditions:

- $f'(x) > 0$ for $0 < x < 1$ and $f'(x) < 0$ for $1 < x < \infty$
- $f''(x) > 0$ for $2 < x < \infty$ and $f''(x) < 0$ for $0 < x < 2$
- $\lim_{x \rightarrow \infty} f(x) = 0$ HA
- $f(x)$ is an odd function (symmetrical about the origin)

3. Sketch a graph of a (continuous) function that satisfies all of the following conditions:

- $f(0) = f(3) = 2$, $f(-1) = f(1) = 0$ points
- $f'(-1) = f'(1) = 0$ Horizontal tangent
- $f'(x) < 0$ for $-\infty < x < -1$ and for $0 < x < 1$
- $f'(x) > 0$ for $-1 < x < 0$ and for $1 < x < \infty$
- $f''(x) > 0$ for $x < 3$ ($x \neq 0$) and $f''(x) < 0$ for $3 < x < \infty$
- $\lim_{x \rightarrow -\infty} f(x) = 4$ HA and $\lim_{x \rightarrow \infty} f(x) = \infty$

4. Sketch a graph of a function that satisfies all of the following conditions:

- $f(0) = 1$, $f(1) = 2$
- $\lim_{x \rightarrow 2^-} f(x) = \infty$, $\lim_{x \rightarrow 1^+} f(x) = -\infty$

5. Sketch a graph of a polynomial (continuous) function that satisfies all of the following conditions:

- $f(3) = 5$, $f(7) = -2$, $f(5) = 2$
- $f'(3) = f'(7) = 0$
- $f'(x) > 0$ for $x < 3$ and $x > 7$, $f'(x) < 0$ for $3 < x < 7$
- $f''(5) = 0$
- $f''(x) > 0$ for $x > 5$ and $f''(x) < 0$ for $x < 5$

6. Graph $f(x)$ if $f'(x) < 0$ when $x < -2$ and when $x > 3$, and $f'(x) > 0$ when $-2 < x < 3$, and $f(-2) = 0$ and $f(3) = 5$.

Warm up: Curve Sketching

1. Sketch a possible graph of the continuous function that satisfies all of the following conditions:

- $f(-7)=5, f(-5)=f(3)=-8, f(-1)=-2$
- $f'(-5)=f'(-1)=0$ Horizontal tangent
- $f'(-7)=f'(3)=DNE$ cusp/v.T
- $\downarrow f'(x) < 0$ for $x \in (-\infty, -7) \cup (-7, -5) \cup (-1, 3)$
- $\uparrow f'(x) > 0$ for $x \in (-5, -1) \cup (3, \infty)$
- $f''(-3)=0$ PDI
- $f''(-7)=f''(3)=DNE \Rightarrow$ cusp/v.T

$\cap$ • $f''(x) < 0$ for $x \in (-\infty, -7) \cup (-3, 3) \cup (3, \infty)$

$\cup$ • $f''(x) > 0$ for $x \in (-7, -3)$

• $\lim_{x \rightarrow -\infty} f(x) = \infty$ and $\lim_{x \rightarrow \infty} f(x) = 5$ HA

2. Given the function $f(x) = \frac{ax+b}{x^2-c}$ and that it has the following properties:

even function the graph of $f(x)$ is symmetric with respect to the y-axis

• $\lim_{x \rightarrow 2} f(x) = +\infty$ VA $\Rightarrow x=2$

• $f'(1) = -2$

(a) Determine the values of a, b & c .

(b) Determine the equation for all asymptotes of the graph of $f(x)$.

VA $\Rightarrow x^2 - c = 0$

$x^2 = c$

$c = 4$

$$f'(x) = \frac{a(x^2-c) - 2x(ax+b)}{(x^2-c)^2}$$

$$= \frac{ax^2 - ac - 2ax^2 - 2xb}{(x^2-c)^2}$$

$$= \frac{-ax^2 - ac - 2xb}{(x^2-c)^2}$$

$f'(1) = -2$ and $c=4$

$$-2 = \frac{-a - ac - 2b}{(1-c)^2}$$

$$-2 = \frac{-a - 4a - 2b}{(1-4)^2}$$

$$-18 = -5a - 2b \quad \text{--- (1)}$$

$$f'(-1) = 2 \text{ and } c=4$$

$$2 = \frac{-a - 4a + 2b}{(1-4)^2}$$

$$18 = -5a + 2b \quad \text{--- (2)}$$

$$-10a = 0$$

$$a = 0$$

$$-18 = -5(0) + 2b$$

$$-18 = 2b = 20$$

$$b = 9$$

b) VA $\Rightarrow x=2, x=-2$

HA $\Rightarrow y=0$

Multiple Choice: Write the CAPITAL LETTER corresponding to the correct answer on the line provided

A 1. Below is the graph of $f'(x)$. For what value(s) of x does $f(x)$ have a local minimum?

- A. $x = -2$ B. $x = 0$ C. $x = 4$ D. None

B 2. Let $f(x)$ be a continuous function. If $f'(x) > 0$ for $x > c$ and $f'(x) < 0$ for $x < c$ then what type of critical point is $(c, f(c))$?

- A. Local maximum
B. Local minimum

- C. Neither a local max nor local min
D. Unknown

C 3. For what values of x is $f(x) = x + \frac{1}{x}$ decreasing?

- A. $-1 < x < 1$
B. $x < -1$

$$f'(x) = 1 - \frac{1}{x^2}$$

- C. $0 < x < 1$
D. all real numbers

$$f'(x) = \frac{x^2 - 1}{x^2} = \frac{(x-1)(x+1)}{x^2}$$

critical #s $\Rightarrow x = 0, \pm 1$

E 4. If $f(x) = -2x^3 - 6x^2 + 8$, then which of the following statements is true?

- I. $f'(x) > 0$ for $x \in (-2, 0)$
II. $f'(-2) = f'(0) = 0$
III. $f(x)$ has one point of inflection

$$f'(x) = -6x^2 - 12x = -6x(x+2)$$

$$f'(x) = 0 \Rightarrow x = 0, -2$$

$$f''(x) = -12x - 12 = -12(x+1)$$

- A. I only B. I and II only

- C. III only

- D. II and III only

- E. I, II & III

D 5. A critical number is:

- A. A number c in the domain of a function f such that $f'(c) > 0$.
B. A number c in the domain of a function f such that $f'(c) < 0$.
C. A number c in the domain of a function f such that $f'(c) = 0$.
D. A number c in the domain of a function f such that $f'(c) = 0$ or does not exist.
E. None of the above

6. True (T) or False (F).

(a) If local max point is $(2, -9)$, then $f'(2) = 0$

False. It might be a cusp or corner

(b) A function has an absolute maximum at a if $f(a) \geq f(x)$ for all x in the domain.

True

(c) A local maximum point can also be an absolute maximum point but not vice-versa.

False. It's true only if the absolute maximum occurs at end points

7. Find the absolute extreme values of the function $g(x) = x^{\frac{2}{3}}(5+x)$, if $-5 \leq x \leq 1$.

$$g(x) = 5x^{\frac{2}{3}} + x^{\frac{5}{3}}$$

$$g'(x) = \frac{10}{3}x^{-\frac{1}{3}} + \frac{5}{3}x^{\frac{2}{3}}$$

$$= \frac{5}{3}x^{-\frac{1}{3}}(2+x)$$

$$= \frac{5(2+x)}{3x^{\frac{1}{3}}}$$

critical #s $\Rightarrow g'(x) = 0$ or $g'(x)$ DNE

$$2+x=0$$

$$x=-2$$

$$g(0) = 0$$

$$g(-2) = (-2)^{\frac{2}{3}}(5-2)$$

$$= 3(4)^{\frac{1}{3}}$$

$$\approx 4.76$$

$$g(-5) = (-5)^{\frac{2}{3}}(5-5)$$

$$= 0$$

$$g(1) = 1^{\frac{2}{3}}(5+1)$$

$$= 6$$

$\therefore$ Absolute maximum is 6

Absolute minimum is 0

8. For Given the function $y = f(x)$ as shown, state

a) the interval(s) where

i. $f'(x) < 0$ & $f(x) > 0$ above x-axis $(-3, -1.6) \cup (2, 3.9)$

ii. $f'(x) > 0$ & $f(x) < 0$ below x-axis $(-1, -0.1)$

b) the local extrema values (specify the "type")

local maximum values : 3, 4 (y-values)

local minimum value : -1

c) the points where $f'(x) = 0$ $x = -3, -1, 2$

d) absolute maximum: 4

e) absolute minimum: N/A or none

9. Find the intervals on which the function $f(x) = (x^2 - 9)^{\frac{2}{3}}$ is increasing and the intervals on which it is decreasing. Determine the x-coordinates of all local extrema.

$$f(x) = \frac{2}{3}(x^2 - 9)^{\frac{2}{3}}(2x)$$

$$= \frac{4x}{3(x^2 - 9)^{\frac{1}{3}}}$$

critical #s:

$$f'(x) = 0 \text{ or } f'(x) \text{ DNE}$$

$$4x = 0$$

$$x = 0$$

$$(x^2 - 9)^{\frac{1}{3}} = 0$$

$$x^2 - 9 = 0$$

$$x^2 = 9$$

$$x = \pm 3$$

	$(-\infty, -3)$	$(-3, 0)$	$(0, 3)$	$(3, \infty)$
$4x$	-	-	+	+
$(x-3)^{\frac{1}{3}}$	-	-	-	+
$(x+3)^{\frac{1}{3}}$	-	+	+	+
$f'(x)$	-	+	-	+
$f(x)$	↓	↑	↓	↑

$\therefore$ The function is increasing on $(-3, 0) \cup (3, \infty)$
and decreasing on $(-\infty, -3) \cup (0, 3)$

Local minimum at $x = -3$ and $x = 3$.

Local maximum at $x = 0$

MHF4U7 Unit 4: Review

Curve Sketching and Optimization

Part A: Multiple Choice-Write the letter of your choice in the space at left.

— 1) Let f be the function with derivative given by $f'(x) = x^2 - \frac{2}{x}$. On which of the following intervals is f decreasing?

- A) $(-\infty, -1]$ B) $(-\infty, 0)$ C) $[-1, 0)$ D) $(0, \sqrt[3]{2})$ E) $(\sqrt[3]{2}, \infty)$

— 2) If the line tangent to the graph of the function f at the point $(1, 7)$ passes through the point $(-2, -2)$, then $f'(1)$ is

- A) -5 B) 1 C) 3 D) 7 E) undefined

— 3) The graph of f' , the derivative of the function f , is shown at right.
Which of the following statements is true about f ?

Graph of f'

A) f is decreasing for $-1 < x < 1$.

B) f is increasing for $-2 < x < 0$.

C) f is increasing for $1 < x < 2$.

D) f has a local minimum at $x = 0$.

E) f is not differentiable at $x = -1$ and $x = 1$.

— 4) Determine constants a and b such that the function $f(x) = x^3 + ax^2 + bx + c$ has a relative minimum at $x = 4$ and a point of inflection at $x = 1$.

- A) $a = 1, b = 3$ B) $a = -3, b = 3$ C) $a = -3, b = -24$
D) $a = 3, b = 0$ E) $a = -6, b = 2$

— 5) Which of the following are true for $h(x) = x^4 - 4x$?

- I. h has a point of inflection at $x = 0$
II. h has an absolute minimum of -3
III. The second derivative test for local extrema is inconclusive

A) I and II B) I and III C) II and III D) I only E) II only

Part B: Full Solution

1. Find the exact value of a such that the function $f(x) = \sqrt{x-2} - \frac{a}{x}$ has a point of inflection at $x=3$.

2. Sketch $f(x) = x^{\frac{2}{3}}(8-x)^{\frac{1}{3}}$. Find the coordinates of all relative extrema and inflection Points.

$$f'(x) = \frac{16-3x}{3x^{\frac{1}{3}}(8-x)^{\frac{2}{3}}} \quad f''(x) = \frac{-128}{9x^{\frac{4}{3}}(8-x)^{\frac{5}{3}}}$$

3. Perform a sketch for the following functions. Clearly indicate the results of each step.

a) $f(x) = \frac{x^3 - 4x}{3x^2 + 9x}$, $f'(x) = \frac{x^2 + 6x + 4}{3(x+3)^2}$, $f''(x) = \frac{10}{3(x+3)^3}$

b) $f(x) = \frac{3x^2}{(x-3)^2}$, $f'(x) = \frac{-18x}{(x-3)^3}$, $f''(x) = \frac{18(2x+3)}{(x-3)^4}$

c) $f(x) = 4 - (x-3)^{\frac{2}{3}}$

4. Consider the function $f(x) = -x^3 + 6x^2 + 15x + 2$ on the closed interval $[-2, 2]$.

a) Find, and classify, all relative extrema.

b) Determine the absolute maximum of the function on the interval.

5. Let $f(x) = x\left(4 + x^2 - \frac{x^4}{5}\right)$. Find the interval(s) on which f is increasing.

6. Use the **SECOND DERIVATIVE TEST** to find the local extrema of the function

$$f(x) = 3x^4 + 8x^3 - 6x^2 - 24x + 3$$

7. The function $f(x) = 2kx^3 + 3x^2 + px - 3$ has a local minimum at $x = -1$ and a point of inflection at $x = 1$. Determine the values of k and p .

8. A function is defined by $f(x) = ax^3 + bx + c$.

a) Find the values of a , b , and c if $f(x)$ has a y-intercept at $(0, 2)$ and a local maximum at $(2, 6)$.

b) Explain how you know there must be local minimum.

9. The slope of tangent to $g(x) = ax^3 + bx^2 + cx$ at its point of inflection $(1, 5)$ is 4. What are the values of a , b , and c .

10. Sketch the graph of a rational function that satisfies all of the following conditions:

$$f''(x) < 0 \text{ when } x < -4 \quad f''(x) > 0 \text{ when } x > -4 \quad f'(x) < 0 \text{ for all } x$$

$$\lim_{x \rightarrow -4^+} f(x) = +\infty \quad \lim_{x \rightarrow -4^-} f(x) = -\infty \quad \lim_{x \rightarrow \pm\infty} f(x) = -2 \quad f(2) = 0$$

11. a) Let f be a function that is even and continuous on the closed interval $[-3,3]$. The function f and its derivatives have the following properties:

$$f(x) > 0 \text{ when } 0 < x < 1 \quad f(x) < 0 \text{ when } 1 < x < 2 \text{ and } 2 < x < 3$$

$$f(0) = 1, \quad f(1) = 0, \quad f(2) = -1, \quad f(3) = 0$$

$$f'(x) > 0 \text{ when } 2 < x < 3, \quad f'(x) < 0 \text{ when } 0 < x < 1 \text{ and when } 1 < x < 2$$

$$f'(0) = DNE, \quad f'(2) = DNE, \quad f'(1) = 0$$

$$f''(x) > 0 \text{ when } 0 < x < 1, \quad f''(x) < 0 \text{ when } 1 < x < 2 \text{ and when } 2 < x < 3$$

$$f''(0) = DNE, \quad f''(2) = DNE \text{ and } f''(1) = 0$$

- b) Find all values of x at which f has a relative extremum. Justify your answer.
 c) Find the coordinates of any inflection points on the graph of f .
 d) Identify the coordinates of any cusp or vertical tangent on the graph of f .
12. Find constants **a, b,** and **c** so that the slope of **normal** to the function $f(x) = ax^3 + bx^2 + c$ at its point of inflection $(1,5)$ is $-\frac{1}{6}$.

13. Let $f(x) = \frac{x^2 - ax + 2}{x^2 - bx + 3}$. Determine the values of **a** and **b** so that $f(x)$ has **only one** vertical asymptote at $x = -3$.

14. Two positive numbers have a product of 9. How should they be chosen so that the sum of their squares will be a minimum? What is that minimum?

15. Lucas has 60 m of fencing that he plans to use to enclose a rectangular area to an equilateral triangular shape garden which is 20 meter long (see the the dimensions that will maximize the area.

16. What are the dimensions of the rectangle of largest area that has a diagonal of length 60 m?

17. What are the dimensions of the largest rectangle that can be inscribed in a right base 60 m and height 40 m?

18. Find the dimensions of the isosceles triangle of greatest area having a perimeter of 60 m.

19. A rectangular box-shaped garbage can with a square base and an open top is to be constructed using exactly 2700 cm^2 of material. Find the dimensions of the box that will provide the greatest possible volume.
20. The owner of a condominium complex has 45 units all of which will be occupied if the rent charged is \$600 per month. The owner estimates that for every \$20 increase in rent, one of the units will become vacant. The owner sets aside \$60 per month from each of the occupied units to establish a repair fund. What rent should be charged per month in order to maximize the owner's profit if there are no other expenses? What is the owner's maximum monthly profit? How many units are occupied?
21. If it costs \$1000 to manufacture 200 gizmos, then the average cost to manufacture each gizmo is $\$1000/200$ or \$5. Assume that the cost to manufacture x gizmos is given by the function $f(x) = 700 + 0.3x + 0.006x^2$. Find the number of gizmos that should be manufactured to minimize the average cost per gizmo.

Part A: Multiple Choice-Write the letter of your choice in the space at left.

D
 — 1) Let f be the function with derivative given by $f'(x) = x^2 - \frac{2}{x}$. On which of the following intervals is f decreasing?

- A) $(-\infty, -1]$ B) $(-\infty, 0)$ C) $[-1, 0)$ D) $(0, \sqrt[3]{2})$ E) $(\sqrt[3]{2}, \infty)$

C
 — 2) If the line tangent to the graph of the function f at the point $(1, 7)$ passes through the point $(-2, -2)$, then $f'(1)$ is

- A) -5 B) 1 C) 3 D) 7 E) undefined

B
 — 3) The graph of f' , the derivative of the function f , is shown at right.
 Which of the following statements is true about f ?

Graph of f'

A) f is decreasing for $-1 < x < 1$.

B) f is increasing for $-2 < x < 0$.

C) f is increasing for $1 < x < 2$.

D) f has a local minimum at $x = 0$.

E) f is not differentiable at $x = -1$ and $x = 1$.

C
 — 4) Determine constants a and b such that the function $f(x) = x^3 + ax^2 + bx + c$ has a relative minimum at $x = 4$ and a point of inflection at $x = 1$.

- A) $a = 1, b = 3$ B) $a = -3, b = 3$ C) $a = -3, b = -24$
 D) $a = 3, b = 0$ E) $a = -6, b = 2$

E
 — 5) Which of the following are true for $h(x) = x^4 - 4x$?

- I. h has a point of inflection at $x = 0$
 II. h has an absolute minimum of -3
 III. The second derivative test for local extrema is inconclusive

- A) I and II B) I and III C) II and III D) I only E) II only

Part B: Full Solution

1. Find the exact value of a such that the function $f(x) = \sqrt{x-2} - \frac{a}{x}$ has a point of inflection at $x=3$.

$$f(x) = (x-2)^{\frac{1}{2}} - ax^{-1}$$

$$f'(x) = \frac{1}{2}(x-2)^{-\frac{1}{2}} + ax^{-2}$$

$$f''(x) = \frac{-1}{4}(x-2)^{-\frac{3}{2}} - 2ax^{-3}$$

$$f''(3) = 0 \rightarrow \frac{-1}{4}(3-2)^{-\frac{3}{2}} - 2a(3)^{-3} = 0$$

$$\frac{-1}{4} - \frac{2a}{27} = 0$$

$$-27 = 8a \rightarrow a = \frac{-27}{8}$$

2. Sketch $f(x) = x^{\frac{2}{3}}(8-x)^{\frac{1}{3}}$. Find the coordinates of all relative extrema and inflection Points.

$$f'(x) = \frac{16-3x}{3x^{\frac{1}{3}}(8-x)^{\frac{2}{3}}} \quad f''(x) = \frac{-128}{9x^{\frac{4}{3}}(8-x)^{\frac{5}{3}}}$$

$$f'(x) = 0 : 16 - 3x = 0$$

$$x = \frac{16}{3} \approx 5.3$$

$$f'(x) \text{ dne} \rightarrow x = 0, x = 8$$

$$f''(x) \text{ dne} \rightarrow x = 0, x = 8$$

∞

∞

x-int: (0,0) & (8,0)

local min: (0,0)

local max: (5.3, 4.2)

There is a cusp at $x=0$ and there is a vertical tangent at $x=8$

3. Perform a sketch for the following functions. Clearly indicate the results of each step.

a) $f(x) = \frac{x^3 - 4x}{3x^2 + 9x}$, $f'(x) = \frac{x^2 + 6x + 4}{3(x+3)^2}$, $f''(x) = \frac{10}{3(x+3)^3}$

$$f(x) = \frac{\cancel{x}(x-2)(x+2)}{3\cancel{x}(x+3)}$$

$$f(x) = \frac{(x-2)(x+2)}{3(x+3)}, x \neq 0 \text{ (hole at } (0, \frac{-4}{9}) \text{)}$$

$$x\text{-int : } (2, 0) \text{ \& } (-2, 0)$$

y-int: none

$$f'(x) = 0 : x = 3 \pm \sqrt{5}$$

local min : $(-0.8, -0.5)$

local max : $(-5.2, -3.5)$

$$V.A : x = -3$$

$$\lim_{x \rightarrow -3^-} f(x) = -\infty, \quad \lim_{x \rightarrow -3^+} f(x) = \infty$$

$$f(x) = \left(\frac{1}{3}x - 1\right) + \frac{5}{3(x+3)}$$

$$O.A : y = \frac{1}{3}x - 1$$

$$\lim_{x \rightarrow \infty} \left[f(x) - \left(\frac{1}{3}x - 1\right) \right] = 0 \text{ (above)}$$

$$\lim_{x \rightarrow -\infty} \left[f(x) - \left(\frac{1}{3}x - 1\right) \right] = 0 \text{ (below)}$$

b) $f(x) = \frac{3x^2}{(x-3)^2}$, $f'(x) = \frac{-18x}{(x-3)^3}$, $f''(x) = \frac{18(2x+3)}{(x-3)^4}$

c) $f(x) = 4 - (x-3)^{\frac{2}{3}}$

$$f'(x) = -\frac{2}{3}(x-3)^{-\frac{1}{3}}$$

$$f''(x) = \frac{2}{9}(x-3)^{-\frac{4}{3}}$$

4. Consider the function $f(x) = -x^3 + 6x^2 + 15x + 2$ on the closed interval $[-2, 2]$.
- Find, and classify, all relative extrema.
 - Determine the absolute maximum of the function on the interval.

$$f'(x) = -3x^2 + 12x + 15$$

$$0 = -3(x^2 - 4x - 5)$$

$$0 = -3(x - 5)(x + 1)$$

$$x = 5, \boxed{x = -1}$$

N.I.D

local min : (-1, -6)

$$f(-2) = 4$$

$$f(-1) = -6 \rightarrow \text{abs. min}$$

$$f(2) = 48 \rightarrow \text{abs. max}$$

5. Let $f(x) = x\left(4 + x^2 - \frac{x^4}{5}\right)$. Find the interval(s) on which f is increasing.

$$f(x) = 4x + x^3 - \frac{x^5}{5}$$

$$f'(x) = 4 + 3x^2 - x^4$$

$$0 = -(x^2 - 4)(x^2 + 1)$$

$$0 = -(x - 2)(x + 2)(x^2 + 1)$$

$$x = 2, -2$$

x	$-\infty$	-2	2	∞
Sign of $f'(x)$	Negative	Positive	Negative	

Interval of increasing : (-2, 2)

6. Use the **SECOND DERIVATIVE TEST** to find the local extrema of the function

$$f(x) = 3x^4 + 8x^3 - 6x^2 - 24x + 3$$

$$f'(x) = 12x^3 + 24x^2 - 12x - 24$$

$$0 = 12(x^3 + 2x^2 - x - 2)$$

$$0 = 12(x-1)(x+1)(x+2)$$

$$x = 1, x = -1, x = -2$$

$$f''(x) = 12x^3 + 24x^2 - 12x - 24$$

$$f''(x) = 12(3x^2 + 4x - 1)$$

$$f''(1) > 0 \rightarrow \text{local min at } x = 1$$

$$f''(-1) < 0 \rightarrow \text{local max at } x = -1$$

$$f''(-2) > 0 \rightarrow \text{local min at } x = -2$$

7. The function $f(x) = 2kx^3 + 3x^2 + px - 3$ has a local minimum at $x = -1$ and a point of inflection at $x = 1$. Determine the values of k and p .

$$f'(x) = 6kx^2 + 6x + p$$

$$f''(x) = 12kx + 6$$

$$f'(-1) = 0 \rightarrow 6k - 6 + p = 0 \quad (1)$$

$$f''(1) = 0 \rightarrow 12k + 6 = 0 \quad (2)$$

$$\text{From (2): } \boxed{k = \frac{-1}{2}} \xrightarrow{\text{sub. into (1)}} -3 - 6 + p = 0$$

$$\boxed{p = 9}$$

8. A function is defined by $f(x) = ax^3 + bx + c$.

- a) Find the values of a , b , and c if $f(x)$ has a y-intercept at $(0, 2)$ and a local maximum at $(2, 6)$.

$$f(x) = ax^3 + bx + c$$

$$f'(x) = 3ax^2 + b$$

$$f(0) = 2 \rightarrow \boxed{c = 2}$$

$$f(2) = 6 \rightarrow 8a + 2b + c = 6 \xrightarrow{\text{sub. } c=2} 8a + 2b = 4 \text{ or } 4a + b = 2 \quad (*)$$

$$f'(2) = 0 \rightarrow 12a + b = 0 \longrightarrow b = -12a$$

$$\text{sub. } b = -12a \text{ into } (*): 4a - 12a = 2$$

$$-8a = 2$$

$$\boxed{a = \frac{-1}{4}} \text{ \& } \boxed{b = 3}$$

- b) Explain how you know there must be local minimum. **Using sign chart for f'**

9. The slope of tangent to $g(x) = ax^3 + bx^2 + cx$ at its point of inflection $(1, 5)$ is 4. What are the values of a , b , and c .

$$g(x) = ax^3 + bx^2 + cx$$

$$g'(x) = 3ax^2 + 2bx + c$$

$$g''(x) = 6ax + 2b$$

$$g(1) = 5 \rightarrow a + b + c = 5 \quad (1)$$

$$g'(1) = 4 \rightarrow 3a + 2b + c = 4 \quad (2)$$

$$g''(1) = 0 \rightarrow 6a + 2b = 0 \quad (3)$$

$$(2) - (1) : 2a + b = -1 \quad (4)$$

$$\begin{cases} 3a + b = 0 \\ 2a + b = -1 \end{cases} \Rightarrow \boxed{a=1} \text{ \& } \boxed{b=-3} \text{ \& } \boxed{c=7}$$

10. Sketch the graph of a rational function that satisfies all of the following conditions:

$$f''(x) < 0 \text{ when } x < -4 \quad f''(x) > 0 \text{ when } x > -4 \quad f'(x) < 0 \text{ for all } x$$

$$\lim_{x \rightarrow -4^+} f(x) = +\infty \quad \lim_{x \rightarrow -4^-} f(x) = -\infty \quad \lim_{x \rightarrow \pm\infty} f(x) = -2 \quad f(2) = 0$$

11. a) Let f be a function that is even and continuous on the closed interval $[-3, 3]$. The function f and its derivatives have the following properties:

$$f(x) > 0 \text{ when } 0 < x < 1 \quad f(x) < 0 \text{ when } 1 < x < 2 \text{ and } 2 < x < 3$$

$$f(0) = 1, \quad f(1) = 0, \quad f(2) = -1, \quad f(3) = 0$$

$$f'(x) > 0 \text{ when } 2 < x < 3, \quad f'(x) < 0 \text{ when } 0 < x < 1 \text{ and when } 1 < x < 2$$

$$f'(0) = DNE, \quad f'(2) = DNE, \quad f'(1) = 0$$

$f''(x) > 0$ when $0 < x < 1$, $f''(x) < 0$ when $1 < x < 2$ and when $2 < x < 3$

$f''(0) = DNE$, $f''(2) = DNE$ and $f''(1) = 0$

b) Find all values of x at which f has a relative extremum. Justify your answer.

Absolute(relative) max at $x=0$

Absolute(relative) minimum at $x=2$ and $x=-2$

c) Find the coordinates of any inflection points on the graph of f .

Points of inflection at $x=1$ and $x=-1$ because the sign of f'' changes at $x=1$ and f is even

d) Identify the coordinates of any cusp or vertical tangent on the graph of f .

Cusp at $x=-2$, $x=0$ and $x=2$

12. Find constants **a**, **b**, and **c** so that the slope of **normal** to the function $f(x) = ax^3 + bx^2 + c$ at its point of inflection $(1, 5)$ is $-\frac{1}{6}$.

$$f'(x) = 3ax^2 + 2bx$$

$$f''(x) = 6ax + 2b$$

$$m_{\perp} = -\frac{1}{6} \Rightarrow m_T = 6$$

$$\left. \begin{array}{l} f'(1) = 6 \rightarrow 3a + 2b = 6 \\ f''(1) = 0 \rightarrow 6a + 2b = 0 \end{array} \right\} \boxed{a = -2} \text{ \& } \boxed{b = 6}$$

$$f(1) = 5 \rightarrow -2 + 6 + c = 5 \text{ } \boxed{c = 1}$$

13. Let $f(x) = \frac{x^2 - ax + 2}{x^2 - bx + 3}$. Determine the values of **a** and **b** so that $f(x)$ has **only one** vertical asymptote at $x = -3$.

$$\text{Let } f(x) = \frac{p(x)}{q(x)}$$

since $x = -3$ is the vertical asymptote of $f(x)$,
 $p(-3) = 0$ and $q(-3) \neq 0$

$$9 + 3b + 3 = 0 \rightarrow 3b = -12$$

$$\boxed{b = -4}$$

$$x^2 + 4x + 3 = (x + 3)(x + 1)$$

$$p(-1) = 0 \rightarrow 1 + a + 2 = 0$$

$$\boxed{a = -3}$$

14.

$$xy = 9$$

$$y = \frac{9}{x}$$

$$f = x^2 + y^2$$

$$f(x) = x^2 + (9x^{-1})^2, x > 0$$

$$f'(x) = 2x - 162x^{-3}$$

$$f'(x) = 0 \Rightarrow 2x = 162x^{-3}$$

$$2x = \frac{162}{x^3}$$

$$2x^4 = 162$$

$$x^4 = 81$$

$$x = \pm 3 \xrightarrow{x > 0} \boxed{x = 3}$$

$$(3)(3) = 9$$

$$(3)^2 + (3)^2 = 18$$

15.

$$P = x - 20 + x + 2y$$

$$60 = 2x + 2y - 20$$

$$80 = 2(x + y) \text{ @ } y = 40 - x$$

$$A = xy$$

$$A(x) = x(40 - x), 0 < x < 40$$

$$A(x) = -x^2 + 40x$$

$$A'(x) = -2x + 40$$

$$A'(x) = 0$$

$$-2x = -40$$

$$x = 20$$

$$y = 40 - 20$$

$$y = 20$$

$$A = (20)(20)$$

$$A = 400\text{m}^2$$

16.

$$c^2 = a^2 + b^2$$

$$(60)^2 = a^2 + b^2$$

$$3600 = a^2 + b^2$$

$$a^2 = -b^2 + 3600$$

$$a = \sqrt{-b^2 + 3600}$$

$$A = ab$$

$$A(b) = b\sqrt{-b^2 + 3600}, 0 < b < 60$$

$$A'(b) = \sqrt{-b^2 + 3600} + \frac{-2b^2}{2\sqrt{-b^2 + 3600}}$$

$$A'(b) = 0 \Rightarrow -b^2 + 3600 = b^2$$

$$2b^2 - 3600 = 0$$

$$b^2 = 1800$$

$$b = 30\sqrt{2}$$

$$a = \sqrt{-1800 + 3600}$$

$$a = 30\sqrt{2}$$

$$A = 1800 \text{ m}^2$$

b

17.

A rectangle has parallel sides so you can try to eliminate y using proportions from similar triangles.

$$\frac{60-x}{y} = \frac{x}{40-y}$$

$$2400 - 40x - 60y + xy = xy$$

$$y = \frac{-2400 + 40x}{-60}$$

$$y = -\frac{2}{3}x + 40$$

Area of the rectangle

$$A = xy$$

$$A(x) = x\left(-\frac{2}{3}x + 40\right)$$

$$A(x) = -\frac{2}{3}x^2 + 400x$$

$$A'(x) = -\frac{4}{3}x + 40$$

$$0 = -\frac{4}{3}x + 400$$

$$-40 = -\frac{4}{3}x$$

$$x = 30$$

$$\text{then } y = -\frac{2}{3}(30) + 40$$

$$y = 20$$

$$A = (30)(20)$$

$$A = 600 \text{ m}^2$$

18.

$$P = 2l + 2b$$

$$60 = 2l + 2b$$

$$l = -b + 30$$

$$A = \frac{1}{2}h(2b) = hb$$

$$l^2 = b^2 + h^2$$

$$(-b + 30)^2 = b^2 + h^2$$

$$h^2 = (-b + 30)^2 - b^2$$

$$h^2 = b^2 - 60b + 900 - b^2$$

$$h = \sqrt{-60b + 900}$$

$$A = hb$$

$$A(b) = (\sqrt{-60b + 900})(b)$$

$$A(b) = b\sqrt{900 - 60b}$$

$$A'(b) = (900 - 60b) + \frac{1}{2}(900 - 60b)^{-\frac{1}{2}}(-60)(b)$$

$$A'(b) = (900 - 30b)^{-\frac{1}{2}}[(900 - 60b) - 30b]$$

$$A'(b) = \frac{1}{2}(900 - 30b)^{-\frac{1}{2}}(900 - 90b)$$

$$0 = 900 - 90b$$

$$b = 10$$

$$A = b\sqrt{-60b + 900}$$

$$A = (10)\sqrt{-60(10) + 900}$$

$$A = 100\sqrt{3} \text{ m}^2$$

19.

$$SA = 4xh + x^2$$

$$2700 = 4xh + x^2, \quad h = \frac{2700 - x^2}{4x}$$

$$V = x^2h, \quad V = x^2 \left(\frac{2700 - x^2}{4x} \right)$$

$$V = 675x - \frac{x^3}{4}$$

$$V' = 675 - \frac{3x^2}{4}$$

$$0 = 675 - .75x^2$$

$$-675 = -.75x^2$$

$$x^2 = 900, \quad x = 30\text{cm}$$

$$h = \frac{2700 - (30)^2}{4(30)}$$

$$h = 15\text{cm}$$

$$V = x^2h$$

$$V = 13500 \text{ cm}^3$$

20.

Profit = Revenue - Expenses

$$P = (600 + 20x)(45 - x) - 60(45 - x)$$

$$P = -20x^2 + 360x + 24300$$

$$P' = -40x + 360$$

$$0 = -40(x - 9)$$

$$x = 9$$

$$\therefore P = -20(9^2) + 360(9) + 24300$$

$$P = \$25920 \quad 45 - 9 = 36 \text{ units}$$

21.

you need to minimize the average cost so you need to divide by x number of gizmos

$$f(x) = \frac{0.006x^2 + 0.3x + 700}{x}$$

$$f(x) = 0.006x + 0.3 + 700x^{-1}$$

$$f'(x) = 0.006 - 700x^{-2}$$

$$0 = 0.006 - 700x^{-2}$$

$$700x^{-2} = .006$$

$$700 = .006x^2$$

$$x^2 = 116667$$

$$x = 341.57$$

About 342 gizmos should be manufactured
